ISO 22157:2019 (E)

Bamboo structures — Determination of physical and mechanical properties of bamboo culms — Test methods

Contents

Foreword

1 Scope

2 Normative references

3 Terms and definitions

4 Symbols

5 General requirements

5.1 Temperature and humidity
5.2 Rate of load application
5.3 Calibration
5.4 Test report

6 Sampling and storage of specimens

6.1 Sampling
6.2 Selection
6.3 Felling, marking and sample preparation
6.4 Despatch
6.5 Receipt and storage of the bamboo culms
6.6 Marking and conversion into test specimens

7 Moisture content

7.1 Moisture content by oven-dry method
7.1.1 Apparatus
7.1.2 Preparation of test pieces
7.1.3 Procedure
7.1.4 Calculation and expression of results
7.2 Moisture content by electrical moisture meter method
7.2.1 General
7.2.2 Apparatus
7.2.3 Procedure
7.2.4 Calculation and expression of results
7.2.5 Test report

8 Density

8.1 General
8.2 Apparatus
8.3 Preparation of test pieces
8.4 Procedure
8.5 Calculations and expressions of results
8.6 Test report

9 Mass per unit length

9.1 General
9.2 Apparatus
9.3 Preparation of test pieces
9.4 Procedure
9.5 Calculations and expressions of results

10 Compression strength and stiffness parallel to the fibres

10.1 Apparatus
10.2 Preparation of tests specimens
10.3 Procedure
10.4 Calculation and expression of results
10.5 Test report

11 Tension strength and stiffness parallel to the fibres

11.1 Apparatus
11.2 Preparation of test specimens
11.3 Procedure
11.4 Calculation and expression of results
11.5 Test report

12 Bending strength and stiffness parallel to the fibres

12.1 General
12.2 Apparatus
12.3 Preparation of test culms.
12.4 Procedure
12.5 Calculation and expression of results
12.6 Test report

13 Shear strength parallel to fibres

13.1 Apparatus
13.2 Preparation of test specimens
13.3 Procedure
13.4 Calculation and expression of results
13.5 Test report

14 Tension strength perpendicular to the fibres

14.1 Apparatus
14.2 Preparation of tests specimens
14.3 Procedure
14.4 Calculation and expression of results
14.5 Test report

15 Bending strength and stiffness perpendicular to the fibres

15.1 General
15.2 Apparatus
15.3 Preparation of test culms.
15.4 Procedure
15.5 Calculation and expression of results
