ISO 22476-9:2020 (E)

Geotechnical investigation and testing — Field testing — Part 9: Field vane test (FVT and FVT-F)

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms, definitions and symbols

3.1 Terms and definitions
3.2 Symbols

4 Equipment and configurations

4.1 Test equipment
4.1.1 Vane and vane shaft
4.1.2 Friction reducer
4.1.3 Slip coupling
4.1.4 Extension rods, protective casings, protection shoe
4.1.5 Rotation unit
4.1.6 Equipment for measuring rotation and torque
4.2 Test configurations

5 Selection of equipment and test configuration

5.1 Selection of equipment
5.2 Selection of test configuration

6 Test procedure

6.1 Equipment checks and calibrations
6.2 Position and inclination of thrust machine
6.3 Test depths
6.4 Internal friction torque reading prior to testing
6.5 Methods for reaching the level for insertion of the vane
6.6 Insertion of the vane
6.7 External friction torque reading
6.8 Vane shear test
6.9 Internal friction torque reading after the test

7 Test results

8 Reporting

8.1 General
8.2 Reporting of test results
8.2.1 General information
8.2.2 Location of the test
8.2.3 Test equipment
8.2.4 Test procedure
8.2.5 Test results
8.3 Presentation of test plots

Annex A (informative) Test phases

Annex B (informative) Example of field report for field vane test

Annex C (normative) Maintenance, checks and calibration

C.1 General
C.2 Checks and Maintenance Procedures
C.2.1 Straightness of extension rods and casing
C.2.2 Vane requirements
C.2.3 Maintenance procedures
C.3 Calibration
C.3.1 General procedures
C.3.2 Calibration of torque measuring equipment
C.3.3 Calibration of rotation measuring equipment

Annex D (informative) Uncertainties in field vane testing

Annex E (normative) General interpretation and explanation for tapered and rectangular vanes with H/D ratios differing from 2

Annex F (informative) Interpretation and explanation for a rectangular vane with rounded corners

Annex G (informative) Calculation of test depth corrected for inclination

Annex H (informative) Example of estimation of post-peak behaviour
