DIN EN 15643:2021-12 (E)

Sustainability of construction works - Framework for assessment of buildings and civil engineering works

Contents

Page

European foreword 3

Introduction 5

1 Scope 9

2 Normative references 9

3 Terms and definitions 10

4 Principles 27
4.1 General 27
4.2 Objectives of sustainability assessment of construction works 28
4.3 Approach to assessment of sustainability 28
4.4 Relevance of technical and functional requirements 28
4.5 Consideration of the construction works life cycle 28
4.6 Assessment of aspects and impacts related to the buildings and civil engineering works 29
4.7 Considerations for sustainable refurbishment of existing construction works as alternative to new construction 29

5 Requirements for assessment methods 29
5.1 General 29
5.2 Object of assessment and the system boundary 29
5.3 Functional equivalent 30
5.4 Type of data and their assignment to the construction works life cycle 31
5.4.1 Assignment of data to the construction works life cycle 31
5.4.2 Reference study period 31
5.4.3 Aspects and impacts specific to the construction works 31
5.4.4 Scenarios 34
5.5 Requirements for data quality 34
5.6 Requirements for verification 34
5.7 Transparency of the assessment methods 34
5.8 Requirements for reporting and communication 35
5.8.1 General 35
5.8.2 Results of the assessment 35
5.8.3 Environmental, social and economic requirements from regulations and client's brief 38
5.8.4 Technical and functional characteristics 38

6 Requirements for assessment methods of environmental, social and economic performance of construction works 39
6.1 Overview of the methodology for assessment of environmental, social and economic performance of buildings and civil engineering works 39
6.2 Categories of environmental aspects 40
6.3 Categories of social aspects 40
6.4 Categories of economic aspects 41
