DIN EN 16759:2021-12 (E)

Bonded Glazing for doors, windows and curtain walling - Verification of mechanical performance of bonding on aluminium and steel surfaces

Contents

Page

European foreword 3

Introduction 4

1 Scope 5

2 Normative references 5

3 Terms and definitions 7

4 Symbols and abbreviations 7

5 Component requirements 7
5.1 Glass for bonded glazing 7
5.2 Bonding sealant 7
5.3 Anodized aluminium adhesion surface 8
5.3.1 Alloys of aluminium 8
5.3.2 Characteristics of the anodizing 8
5.3.3 Description of the anodizing process 9
5.4 Coated aluminium 9
5.5 Stainless steel 9
5.6 Metal profiles with thermal barrier 10

6 Design of the bonding seal 10

7 Evaluation of mechanical self-weight supports and retaining devices 10
7.1 General 10
7.2 Evaluation of mechanical self-weight supports and retaining devices by calculation 11
7.3 Evaluation of mechanical self-weight supports and retaining devices by testing 12
7.3.1 General 12
7.3.2 Test on the mechanical self-weight support 12
7.3.3 Test on mechanical self-weight support and retaining devices 13

8 Verifications necessary in case of interchange of components 13

Annex A (informative) Principles of bonded glazing 15

Annex B (normative) Requirements of setting block material 20

Annex C (normative) Definition of testing for coated aluminium surfaces 21

Annex D (normative) Stainless steel surfaces 25

Annex E (normative) Factory production control testing plan 26

Annex F (normative) Definition of testing for profiles with thermal barrier 28
