Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Termsanddefinitions 1

4 Symbols, subscripts and abbreviated terms 4
4.1 Symbols 4
4.2 Subscripts 4
4.3 Abbreviated terms 4

5 General description of the methods and choices 5
5.1 Basic principles of the assessment methods 5
5.1.1 Primary energy factors (PEF) 5
5.1.2 CO2 emission coefficient 7
5.1.3 CO2 emission coefficient for an exported energy carrier cr 7
5.1.4 Assessment boundary 7
5.1.5 Origin of delivered energies 8
5.1.6 Accounting methods 9
5.2 Short description of the choices 11

6 Set of different choices related to PEF and CO2emissioncoefficient 11
6.1 Choices related to the perimeter -- Geographical perimeter 11
6.2 Choices related to calculation conventions 12
6.2.1 Time resolution 12
6.2.2 Sources (time horizon) of the data used 12
6.2.3 Net calorific value (NCV) or gross calorific value (GCV) 13
6.3 Choices related to the data 13
6.3.1 Energy sources to be considered (available energy sources) 13
6.3.2 Type of CO2 emission coefficients 13
6.3.3 Conventions related to energy conversion 15
6.3.4 Conventions for PEF related to exported energy 15
6.4 Choices related to the assessment methodologies 16
6.4.1 Energy exchanges with other geographical perimeters 16
6.4.2 Calculation approaches for multisource generation mix 17
6.4.3 Allocation of multi energy output system 18
6.4.4 Life cycle method 18

Annex A (normative) Template for reporting the choices in the calculation of PEF and CO2 emissioncoefficient 20

Annex B (informative) Examples of assessment boundaries 22

Annex C (informative) Additional explanation and reporting 24
