DIN EN 12697-6:2024-01 (E)

Bituminous mixtures - Test methods - Part 6: Determination of bulk density of bituminous specimens

Contents

Page

European foreword 3

1 Scope 5

2 Normative references 5

3 Terms and definitions 5

4 Principle 6

5 Materials 6
5.1 General 6
5.2 Additional materials for the sealed specimen procedure 6

6 Apparatus 6
6.1 General 6
6.2 Additional apparatus for the dry, SSD and sealed specimen procedures 6
6.3 Additional apparatus for the SSD-procedure 7
6.4 Additional apparatus for the dimensions procedure 7

7 Sample sizes and sample handling 7

8 Preparation of sample 7

9 Procedure 7
9.1 General 7
9.2 Procedure A: Bulk density -- dry 7
9.3 Procedure B: Bulk density -- Saturated surface dry (SSD) 8
9.4 Procedure C: Bulk Density -- Sealed specimen 8
9.5 Procedure D: Bulk density by dimensions 9

10 Calculation 9
10.1 Procedure A: Bulk density -- dry 9
10.2 Procedure B: Bulk density -- SSD 9
10.3 Procedure C: Bulk density -- Sealed specimen 10
10.4 Procedure D: Bulk density by dimensions 10
10.4.1 Cylindrical specimen 10
10.4.2 Rectangular specimen 11

11 Precision 11
11.1 General 11
11.2 Repeatability (same observer -- same apparatus) 11
11.3 Reproducibility (different observers -- different apparatus) 11

12 Test report 12

Annex A (informative) General guidance on selection of a test procedure to determine the bulk density of compacted bituminous materials 13

A.1 General 13
A.2 Background (see Figure A.1) 13
A.3 Guidance 14
