

DIN EN 15941:2024-10 (E)

Sustainability of construction works - Data quality for environmental assessment of products and construction work - Selection and use of data

Contents		Page
European foreword		6
1	Scope	7
2	Normative references	7
3	Terms and definitions	8
4	Abbreviations	10
5	Types of data at product, building and construction works level	10
5.1	General	10
5.2	Sources of generic data for use at product, building and construction works level	11
5.3	Examples of data and their uses at building and construction works level	11
5.4	Types of EPD	14
6	Data quality criteria and aspects for products and construction works	17
6.1	General	17
6.2	International Reference Life Cycle Data System data	17
6.3	Time-related coverage	17
6.3.1	General	17
6.3.2	General time related criteria	18
6.3.3	Time-related criteria for construction products and buildings	18
6.3.4	Time related meta-data for ILCD data sets	19
6.4	Geographical coverage	20
6.4.1	General geography related criteria	20
6.4.2	Geography related criteria for construction products and buildings	21
6.4.3	Geography related meta-data for ILCD data sets	21
6.5	Technological coverage	22
6.5.1	General	22
6.5.2	Technology-related criteria at product level	22
6.5.3	Technology related criteria for data quality at building level	22
6.5.4	Technology related meta-data for ILCD data sets	23
6.6	Aspect of Precision	24
6.6.1	General	24
6.6.2	Precision related meta-data for ILCD data sets	25
6.7	Aspect of Completeness	25
6.7.1	General	25
6.7.2	Aspect of Completeness at product level	26
6.7.3	Aspect of Completeness at building level	26
6.7.4	Completeness related meta-data for ILCD data sets	27
6.8	Aspect of Consistency	27
6.8.1	General	27
6.8.2	Consistency related meta-data for ILCD data sets	28
6.9	Sources of the data	30
6.10	Meta-data for ILCD data sets related to Sources of data	30
7	Data Quality at Product level	31
7.1	Assessing Data Quality at product level	31
7.1.1	General	31
7.1.2	Relevant data	31

7.1.3	Assessing data quality of average or specific data	32
7.1.4	Assessing data quality of generic data	33
7.1.5	Assessing data quality of the final EPD	33
7.2	Selecting and Collecting data at product level	33
7.2.1	General	33
7.2.2	Selecting raw data	34
7.2.3	Selection of specific and generic data	36
7.3	Reporting data quality at Product Level	39
7.3.1	General	39
7.3.2	Reporting data quality in the project report	39
7.3.3	Reporting data quality in the EPD	40
7.3.4	Other data quality information in the EPD	42
7.3.5	Providing the EPD in ILCD format	42
8	Data quality at building level	42
8.1	General	42
8.2	Assessment during specific design and decision steps/stages	43
8.3	Assessing data quality at building level	43
8.3.1	General	43
8.3.2	Time related	44
8.3.3	Geography related	44
8.3.4	Technology Related	44
8.3.5	Completeness	45
8.3.6	Consistency	47
8.3.7	Plausibility	48
8.3.8	Precision	48
8.4	Selection of quantity data, environmental data and other information	48
8.4.1	General	48
8.4.2	Selecting data to describe the building	48
8.4.3	Selecting of quantity data for the building assessment	49
8.4.4	Selecting of environmental data for products and processes for the building assessment	50
8.5	Data quality of the assessment results of the building's environmental performance	53
8.5.1	General	53
8.5.2	Data quality evaluation of quantification	53
8.5.3	Data quality evaluation during Type 1 and Type 2 Assessments	54
8.5.4	Data quality evaluation during Type 2, Type 3 and Type 4 assessments	54
8.5.5	Summarizing data quality	55
8.6	Databases, data set providers and tools	56
8.7	Reporting data quality generally at building level	56
8.8	Verification and review	59
9	Data quality at civil engineering works level	59
Annex A (informative)	Overview of definitions used in this document and those in EN 15804 and PEF and Level(s)	60
A.1	Overview of definitions	60
A.2	Foreground and background data	65
A.3	Raw data	65
A.4	Specific and generic data	65
Annex B (informative)	Mass Balance at product level	66
Annex C (informative)	Examples of reporting data quality in EPD	69
Annex D (informative)	Examples of the use of a data selection at building level depending on goal and scope and data quality assessment	71
D.1	General	71
D.2	Early-stage design - no materials chosen	71
D.3	Early-stage design - Some materials chosen	72

D.4	Detailed Design Stage - Cladding comparison	73
D.5	Building Assessment for planning or regulatory purposes	74
D.6	Building Completion - As built assessment	74
Annex E (normative) Avoiding double counting in the selection of specific and generic data for energy at product and building level		75
E.1	General	75
E.1.1	General guidance	75
E.1.2	Overarching requirements for avoiding double counting in the selection of specific and generic data for energy at product and building level	75
E.1.2.1	Avoiding double counting	75
Ensuring transparency		75
Use of Contractual instruments		75
E.2	Avoiding double counting in the selection of specific and generic data for energy at product and building level	75
E.2.1	Overarching Principles	75
E.2.1.1	General	75
E.2.1.2	Requirements for contractual instruments	76
E.2.1.3	Requirement for residual mix	77
E.2.1.4	Recommendation for consistent use of contractual instruments and residual mix	78
E.2.2	Product level Electricity - modelling foreground, upstream and downstream processes within control of the manufacturer(s)	78
E.2.2.1	General	78
E.2.2.2	Electricity from the grid	78
E.2.2.3	Electricity from a directly connected supplier	78
E.2.2.4	Internally generated electricity	79
E.2.2.5	Requirement for modelling of electricity with contractual instruments	79
E.2.2.6	Requirement for transparency	79
E.2.3	Product level Biogas and the gas network - modelling foreground, upstream and downstream data within the control of the manufacturer(s)	79
E.2.3.1	General	79
E.2.3.2	Biogas from the gas network	79
E.2.3.3	Biogas from a directly connected supplier	79
E.2.3.4	Internally generated biogas	80
E.2.3.5	Requirement for modelling of biogas with contractual instruments	81
E.2.3.6	Requirement for transparency	81
E.2.4	Product level - Other energy - modelling foreground, upstream and downstream data in the control of the manufacturer(s)	81
E.2.4.1	General	81
E.2.4.2	Requirement for modelling of other energy with contractual instruments	81
E.2.4.3	Requirement for transparency	81
E.2.5	Product level - Energy - modelling upstream data (A1-A3) not in the control of the manufacturer(s)	81
E.2.6	Product Level Energy - modelling downstream data (A4-C4 and Module D)	81
E.2.7	Building Level Energy - modelling energy use in the building in the Construction Stage, Use Stage, End-of-life stage and Module D2	82
E.2.8	Transparency	82
E.2.8.1	Reporting at product level in the Project Report	82
E.2.8.2	Reporting in EPD	83
E.2.8.3	Reporting at Building Level in the Project Report	83
E.2.8.4	Reporting in Building Level Communication	83
Annex F (informative) Data quality scheme for building level based on Level(s)		84
Bibliography		85
