DIN EN 1993-1-8:2025-04 (E)

Eurocode 3 - Design of steel structures - Part 1-8: Joints

Contents

Page

European foreword 6

0 Introduction 8

1 Scope 11

2 Normative references 11

3 Terms, definitions and symbols 11
3.1 Terms and definitions 11
3.2 Symbols and abbreviations 13

4 Basis of design 33
4.1 General rules 33
4.1.1 Basic requirements 33
4.1.2 Additional requirements 33
4.2 Design assumptions 33
4.3 Structural properties of joints 34
4.3.1 General 34
4.3.2 Partial factors 34
4.4 Hybrid connections 35
4.5 Joints loaded in shear subject to impact, vibration and/or load reversal 35
4.6 Eccentricity at intersections 35

5 Connections using bolts, rivets or pins 36
5.1 Bolts, nuts and washers 36
5.1.1 Property classes 36
5.1.2 Preloaded bolts 36
5.2 Rivets 37
5.3 Anchor bolts and fasteners between steel and concrete 37
5.4 Bolted connections 37
5.4.1 Categories of bolted connections 37
5.4.2 Injection bolts 38
5.4.3 Hybrid connections 38
5.4.4 Connections with lug angles 38
5.5 Pin connections 40
5.6 Riveted connections 41
5.7 Design criteria 41
5.7.1 Design criteria for bolted connections 41
5.7.2 Design criteria for connections with injection bolts 43
5.7.3 Design criteria for pin connections 44
5.7.4 Design criteria for riveted connections 46
5.8 Positioning of holes for bolts and rivets 47
5.9 Design resistance of individual fasteners subject to shear, bearing and/or tension 49
5.9.1 Rivets, and bolts in normal round or slotted holes 49
5.9.2 Fit bolts 53
5.9.3 Bolts in tapped holes 54
5.9.4 Injection bolts 55
5.9.5 Prying forces 56
5.9.6 Fasteners between steel and concrete 56
5.10 Design slip resistance of individual preloaded bolts 56
5.10.1 General 56

5.10.2 Combined tension and shear ... 57
5.11 Design resistance of a group of fasteners loaded in bearing type connections subject to axial force ... 58
5.12 Design resistance of a group of fasteners in slip-resistant connections subject to axial force ... 59
5.13 Design resistance of Category A, B, and C connections subject to bending and axial force ... 59
5.14 Design block tearing resistance ... 60
5.15 Design resistance of angles connected by one leg and other asymmetrically connected members in tension ... 62

6 Welded connections ... 63
6.1 General ... 63
6.2 Welding consumables ... 63
6.3 Geometry and dimensions ... 63
6.3.1 Type of weld ... 63
6.3.2 Fillet welds ... 64
6.3.3 Fillet welds all round ... 66
6.3.4 Butt welds ... 66
6.3.5 Plug welds ... 66
6.3.6 Flare groove welds ... 66
6.4 Welds with packings ... 67
6.5 Design resistance of fillet welds ... 68
6.5.1 Length of welds ... 68
6.5.2 Design throat thickness ... 68
6.5.3 Design resistance of fillet welds ... 69
6.6 Design resistance of fillet welds all round ... 72
6.7 Design resistance of butt welds ... 72
6.7.1 Full penetration butt welds ... 72
6.7.2 Partial penetration butt welds ... 72
6.7.3 T-butt joints ... 73
6.8 Design resistance of plug welds ... 73
6.9 Distribution of forces ... 73
6.10 Connections to unstiffened flanges ... 74
6.11 Design resistance of long joints ... 76
6.12 Eccentrically loaded single-sided fillet or single-sided partial penetration butt welds ... 76
6.13 Angles connected by one leg ... 77
6.14 Welding in cold-formed zones ... 77

7 Structural analysis ... 78
7.1 Global analysis ... 78
7.1.1 General ... 78
7.1.2 Elastic global analysis ... 78
7.1.3 Rigid-plastic global analysis ... 79
7.1.4 Elastic-plastic global analysis ... 80
7.1.5 Global analysis of hollow section lattice girders ... 80
7.2 Modelling of beam-to-column joints ... 82
7.2.1 Scope of application ... 82
7.2.2 General approach ... 83
7.2.3 Simplified approach ... 84
7.2.4 Design moment-rotation curve ... 86
7.2.5 Moment resistance ... 87
7.2.6 Rotational stiffness ... 87
7.2.7 Rotation capacity ... 88
7.3 Classification of joints ... 88
7.3.1 General ... 88
7.3.2 Classification by rotational stiffness ... 88
7.3.3 Classification by moment resistance ... 90

8 Structural joints connecting H or I sections ... 92
8.1 General ... 92
8.2 Structural properties ... 97

8.3 Equivalent T-stub in tension 98
8.3.1 Application 98
8.3.2 Modes of failure 98
8.3.3 Total effective length 98
8.3.4 Design tension resistance 98
8.3.5 Stiffness coefficient 101
8.3.6 Individual bolt rows, bolt groups and groups of bolt rows 101
8.4 Equivalent T-stub in compression 101
8.4.1 Application 101
8.4.2 Total effective length and width 101
8.4.3 Design compression resistance 102
8.4.4 Stiffness coefficient 103

9 Hollow section joints 104
9.1 General 104
9.2 Parameters for hollow section joints 104
9.3 Specific requirements 107
9.4 Design 108
9.4.1 General 108
9.4.2 Failure modes for hollow section joints 112
9.5 Design resistance of welds 116
9.6 Welded joints between brace members and CHS chords 116
9.6.1 General 116
9.6.2 Uniplanar joint configurations 117
9.6.3 Multiplanar joint configurations 123
9.7 Welded joints between plates, CHS or RHS brace members, and RHS chord members 124
9.7.1 General 124
9.7.2 Uniplanar joint configurations 125
9.7.3 Multiplanar joint configurations 136
9.8 Welded joints between CHS or RHS brace members, and I or H section chords 137
9.9 Welded overlap joints between CHS or RHS brace members, and CHS, RHS, I, H or channel section chord members 141

Annex A (normative) Structural properties of basic components 146

A.1 Use of this annex 146
A.2 Scope and field of application 146
A.3 General 146
A.4 Column web panel in shear 146
A.5 Column web in transverse compression 152
A.6 Column web in transverse tension 156
A.7 Column flange in bending 158
A.8 End plate in bending 163
A.9 Flange cleat in bending 167
A.10 Beam or column flange and web in compression 169
A.11 Beam or column web in tension 169
A.12 Plate in tension or compression 170
A.13 Bolts in tension 170
A.14 Bolts in shear 170
A.15 Bearing at bolt holes 171
A.16 Concrete and base plate in compression 173
A.17 Base plate in bending under tension 173
A.18 Anchor bolt in tension 174
A.19 Fasteners between steel and concrete in tension 175
A.20 Anchor bolts in shear 176
A.21 Fasteners between steel and concrete in shear 176
A.22 Welds 176
A.23 Beam haunch in compression 177

Annex B (normative) Design of moment-resisting beam-to-column joints and splices 178

B.1 Use of this annex 178

B.2 Scope and field of application 178
B.3 Design resistance 178
B.4 Rotational stiffness 185
B.5 Rotation capacity 189

Annex C (normative) Design of nominally pinned connections 192

C.1 Use of this annex 192
C.2 Scope and field of application 192
C.3 Ductility and rotation capacity requirements 193
C.4 Design resistances 196

Annex D (normative) Design of column bases 208

D.1 Use of this annex 208
D.2 Scope and field of application 208
D.3 Design of column bases with anchor bolts 209
D.4 Design resistance of column bases with fasteners between steel and concrete 213
