ISO/TS 23782:2024-07 (E)

Requirements for large-scale test methods to represent fire threats to people in different fire scenarios

Contents

Page

Foreword v

Introduction vi

1 Scope 1

2 Normative references 1

3 Terms and definitions 1

4 General principles 2
4.1 Compromised tenability 2
4.2 Fire profile 2

5 Significance and use 3
5.1 Application of large-scale test 3
5.2 Fire test scenario 3
5.3 Suitable test rig 4

6 Suitable test rig design 4
6.1 General 4
6.2 Non-flaming fires in a small room 5
6.3 Small smouldering or flaming fire in a small room 5
6.3.1 General 5
6.3.2 Suitable test rig 5
6.4 Small fire in a room with the door opened 5
6.4.1 General 5
6.4.2 Suitable test rig 5
6.5 Small smouldering or flaming fire in a small room with window partially opened 6
6.5.1 General 6
6.5.2 Suitable test rig 6
6.6 Small smouldering or flaming fire in a small room with large exterior vents opened 6
6.6.1 General 6
6.6.2 Suitable test rig 7
6.7 Flaming fire in a large space with a large floor and high ceiling 7
6.7.1 General (Scenario 1) 7
6.7.2 Suitable test rig -- Scenario 1 7
6.7.3 Scenario 2 7
6.7.4 Suitable test rig -- Scenario 2 7

7 Preparation of test 7
7.1 Occupants of interest 7
7.2 Test rig 8
7.3 Ignition source 8
7.4 Fuel 9
7.5 Instrumentation 9
7.5.1 General 9
7.5.2 Sampling and analysis of toxic fire effluents 9

8 Measurements 10
8.1 Heat 10

8.1.1 General 10
8.1.2 Convective effect 11
8.1.3 Radiant effect 11
8.2 Smoke obscuration 11
8.3 Toxic gas 11
8.4 Equivalence ratio 11
8.5 Mass loss 11
8.6 Miscellaneous 11

9 Data analysis and interpretation 12

9.1 General 12
9.2 Repeatability of test 12
9.3 Reproducibility of test 12

10 Reporting requirements 13

Annex A (informative) Fire classification and typical characteristics 14

Annex B (informative) Suitable test rig with instrumentation: example designs and configurations . 17

Bibliography 19
