

DIN EN 1993-1-7:2026-08 (E)

Eurocode 3 - Design of steel structures - Part 1-7: Plate assemblies with elements under transverse loads

Contents	Page
European foreword	6
0 Introduction	7
1 Scope	10
1.2 Assumptions	11
2 Normative references	11
3 Terms, definitions and symbols	12
3.1 Terms and definitions	12
3.1.1 Structural forms and geometry	12
3.1.2 Failure mechanisms	16
3.1.3 Actions	16
3.1.4 Terms for analysis treatments	17
3.2 Symbols	18
4 Basis of design	21
4.1 General	21
4.2 Reliability management	22
4.3 Design values of geometrical data	22
4.4 Geometrical tolerances and geometrical imperfections	22
4.5 Durability	22
4.6 Verification by the partial factor method	22
5 Material modelling	23
6 Structural analysis	24
6.1 Types of analysis	24
6.1.1 General	24
6.1.2 Membrane and simple bending analysis (MSBA)	25
6.1.3 Linear elastic structural analysis (LA)	25
6.1.4 Linear elastic bifurcation analysis (LBA)	25
6.1.5 Geometrically nonlinear elastic analysis (GNA)	25
6.1.6 Materially nonlinear analysis (MNA)	26
6.1.7 Geometrically and materially nonlinear analysis (GMNA)	26
6.1.8 Geometrically and materially nonlinear analysis with imperfections included (GMNIA)	26
6.2 Modelling of a plate assembly	27
6.2.1 General	27
6.2.2 Plate assembly	27
6.2.3 Treatment of individual plates or panels	28
6.2.4 Boundary conditions	28
6.2.5 Modelling of plate junctions	30
6.3 Modelling of actions and environmental influences	30
6.4 Simplified analysis methods for plate assemblies under general loads	30
6.4.1 General	30
6.4.2 Pyramidal assemblies	34
6.5 Analysis of individual plates or panels	35
6.5.1 General	35
6.5.2 Analysis of unstiffened plates or panels	35
6.5.3 Analysis of uni-directionally stiffened plate or panels	36

6.5.4	Analysis of bi-directionally stiffened plates or panels	38
6.6	Analysis by computational modelling	39
7	Ultimate limit states for plate assemblies	39
7.1	General	39
7.2	Plastic failure limit state (LS1)	39
7.3	Cyclic plasticity limit state (LS2)	39
7.4	Buckling limit state (LS3)	40
7.5	Fatigue limit state (LS4)	40
8	Ultimate limit state design of unstiffened plates	41
8.1	General	41
8.2	Plastic failure limit state (LS1)	41
8.2.1	General	41
8.2.2	Design values of resistance	42
8.2.3	Stress-based design	42
8.2.4	Simple design for one-way bending	43
8.2.5	Design using standard elastic formulae	44
8.2.6	Design using standard plastic formulae	44
8.2.7	Design using global computational analysis	44
8.3	Cyclic plasticity limit state (LS2)	45
8.3.1	General	45
8.3.2	Stress-based design	46
8.3.3	Design using global computational analysis - accumulated strains	46
8.4	Buckling limit state (LS3)	47
8.4.1	General	47
8.4.2	Design using buckling formulae	47
8.4.3	Design by global computational analysis	47
8.5	Fatigue limit state (LS4)	48
9	Ultimate limit state design of uni-directionally stiffened plates	49
9.1	General	49
9.2	Plastic failure limit state (LS1)	49
9.2.1	Stress-based design	49
9.2.2	Design using global computational analysis	50
9.3	Cyclic plasticity limit state (LS2)	51
9.4	Buckling limit state (LS3)	51
9.4.1	General	51
9.4.2	Design of the stiffener and adjacent plate using buckling formulae	51
9.4.3	Design of the stiffener and adjacent plate using computational analysis	52
9.5	Fatigue limit state (LS4)	53
10	Ultimate limit state design of bi-directionally stiffened plates	53
10.1	General	53
10.2	Stress-based design	54
10.3	Design using computational analysis	55
Annex A (informative)	Membrane and simple elastic bending analysis stress resultants in plates and plate assemblies	56
A.1	Use of this annex	56
A.2	Scope and field of application	56
A.3	Symbols	58
A.4	Simplified treatment	58
A.5	Simple formulae for SMBT treatment of a rectangular plate assembly	59
A.6	Simple formulae for SMBT treatment of pyramidal hopper plate assemblies	60
Annex B (informative)	Formulae for linear elastic stresses in unstiffened rectangular plates from small deflection theory	63
B.1	Use of this annex	63
B.2	Scope and field of application	63

B.3	Symbols	64
B.4	Characterization of stresses	64
B.5	Rectangular plates under uniform pressure	65
B.5.1	Boundary conditions	65
B.5.2	Stress descriptors	66
B.5.3	Stresses for SCA: FFFF	66
B.5.4	Stresses for SCB: SSSS	67
B.5.5	Stresses for SCC: FFFS	67
B.5.6	Stresses for SCD: SFFS	68
B.6	Trapezoidal and triangular plates under uniformly distributed pressure	68
B.6.1	General	68
B.6.2	Boundary conditions	68
B.6.3	Stress descriptors	68
B.6.4	Stresses for SCA: FFFF	69
B.6.5	Stresses for SCB: SSSS	69
B.7	Rectangular plates under linearly varying pressure from the top to the bottom	70
B.7.1	General	70
B.7.2	Boundary conditions	70
B.7.3	Stress descriptors	70
B.7.4	Stresses for SCA: FFFF	71
B.7.5	Stresses for SCB: SSSS	71
B.7.6	Stresses for SCC: FFFS	72
B.7.7	Stresses for SCD: SFFS	72
Annex C (informative) Formulae for the plastic reference resistances of unstiffened individual plates and plate assemblies		73
C.1	Use of this annex	73
C.2	Scope and field of application	73
C.3	General	73
C.3.1	Geometries of individual plates	73
C.3.2	Load conditions covered in this annex	74
C.3.3	Boundary conditions for individual plates	74
C.4	Rectangular plates under uniform pressure	75
C.4.1	Geometry and loading	75
C.4.2	Plastic reference resistances under uniform pressure	76
C.5	Rectangular plates under linear variation of pressure	76
C.5.1	General	76
C.5.2	Plastic reference resistance under linear pressure variation	78
C.6	Rectangular plates under Janssen pressure variation	78
C.6.1	General	78
C.6.2	Plastic reference resistance under Janssen pressure variation	79
