DIN EN 17990:2025-12 (E)

Thermal insulation and energy economy in buildings - Method to determine the durability of bondings with adhesive tapes and adhesive masses for the establishment of airtight layers under climatic conditions representative for indoor environments

European foreword 4

1 Scope 5

2 Normative references 5

3 Terms and definitions 6

4 Symbols and units 7

5 Testing 7
5.1 General 7
5.2 Test substrate 8
5.2.1 Reference substrate 8
5.2.2 Product combinations 8
5.3 Climatic boundary conditions 8
5.4 Apparatus 8
5.4.1 Pressure roller and support 8
5.4.2 Device for cutting sample strips (test pieces) 9
5.4.3 Tensile testing machine 9
5.4.4 Climatic chamber for artificial ageing 9
5.4.5 Conditioned room 9
5.4.6 Heating cabinet 9
5.5 Preparation for testing 9
5.5.1 General 9
5.5.2 Sample preparation for the test of single-sided and double-sided adhesive tapes 10
5.5.3 Sample preparation for the test of adhesive masses 12
5.5.4 Tables regarding sample preparation, conditioning and test procedures 13
5.6 Procedure 15
5.6.1 General 15
5.6.2 Execution of T-peel tests (adhesive tapes) 15
5.6.3 Execution of 180° peel test (adhesive masses) 17
5.6.4 Static peel test 18
5.7 Evaluation of tests 20
5.7.1 Determination of maximum and mean peel strength for the T-peel test and the 180° peel test according to 5.6.2 and 5.6.3 20
5.7.2 Evaluation of static peel test 22

6 Test report 22

Annex A (normative) Detailed description of the sample preparation for adhesive masses 23

Annex B (informative) Detailed description of the sample preparation for double sided adhesive tapes 25

B.1 General preparation for double sided adhesive tapes 25
B.2 Subsequent procedure for membranes 26
B.3 Subsequent procedure for beech wood substrates 27
