# DIN EN 1993-1-14:2026-11 (E)

## Eurocode 3 - Design of steel structures - Part 1-14: Design assisted by finite element analysis

## Contents

Page

European foreword ..... 4

0 Introduction ..... 5

1 Scope ..... 8
1.2 Assumptions ..... 8

2 Normative references ..... 9

3 Terms, definitions and symbols ..... 9
3.1 Terms and definitions ..... 9
3.2 Symbols and abbreviations ..... 11
3.2.1 Latin upper-case symbols ..... 11
3.2.2 Latin lower-case symbols ..... 12
3.2.3 Greek upper-case symbols ..... 12
3.2.4 Greek lower-case symbols ..... 13

4 Basis of design ..... 14

5 Modelling ..... 16
5.1 Geometrical models ..... 16
5.1.1 General rules for geometrical modelling and discretization ..... 16
5.1.2 Models using beam elements ..... 16
5.1.3 Models using plate or shell elements ..... 17
5.1.4 Models using solid elements ..... 17
5.1.5 Multi-level and combined models ..... 17
5.2 Support and load models ..... 18
5.2.1 Definition of supports ..... 18
5.2.2 Definition of loads ..... 18
5.3 Material models ..... 19
5.3.1 General ..... 19
5.3.2 Material models for hot-rolled steels with a sharply defined yield point ..... 20
5.3.3 Material models for hot-rolled steels with a rounded stress-strain curve, cold-formed steels and stainless steels ..... 22
5.3.4 Advanced material models ..... 25
5.4 Imperfections ..... 25
5.4.1 Types of imperfection ..... 25
5.4.2 Geometric imperfections ..... 26
5.4.3 Residual stresses ..... 26
5.4.4 Equivalent geometric imperfections ..... 29
5.5 Imperfection combinations ..... 33

6 Analysis ..... 33
6.1 Structural analysis ..... 33
6.1.1 General ..... 33
6.1.2 Types of analysis ..... 34
6.2 Thermal analysis ..... 36

7 Verification and validation ..... 36
7.1 General ..... 36
7.2 Verification ..... 37

7.3 Validation ... 38

8 Design methodology ... 40
8.1 Ultimate limit state (excluding fatigue) ... 40
8.1.1 General ... 40
8.1.2 Elastic resistance check - stress check ... 40
8.1.3 Plastic resistance check ... 41
8.1.4 Buckling resistance check ... 41
8.1.5 Evaluation method for analysis with material nonlinearity ... 44
8.2 Fatigue ... 45
8.2.1 General ... 45
8.2.2 Fatigue checking by the hot spot and effective notch stress method ... 46
8.2.3 Stress extrapolation for the hot spot stress method in joints ... 47
8.2.4 FE modelling - hot spot stress ... 52
8.2.5 FE modelling - effective notch stress ... 53
8.2.6 Additional considerations ... 54
8.3 Serviceability limit state ... 55

9 Documentation ... 55

Annex A (informative) Calculation of model factor (FE) ... 57

A.1 Use of this annex ... 57
A.2 Scope and field of application ... 57
A.3 Calculation of model factor (FE) ... 57

Annex B (informative) Stress concentrations ... 59

B.1 Use of this annex ... 59
B.2 Scope and field of application ... 59
B.3 Separation of stress concentration and numerical singularities ... 59
B.4 Consideration of stress concentration in design ... 60

Annex C (normative) Limits on maximum strains for beam finite elements ... 62

C.1 Use of this annex ... 62
C.2 Scope and field of application ... 62
C.3 Strain limits ... 62

Bibliography ... 66
