IEC/TS 63092-3:2026-08 (E)

Photovoltaics in buildings - Part 3: Determination methodology for the solar heat gain coefficient of building-integrated photovoltaic modules

Contents

Page

FOREWORD 2
INTRODUCTION 4
1 Scope 5
2 Normative references 5
3 Terms and definitions 6
3.1 Terms 6
3.2 Symbols and subscripts 7
4 Test samples and equipment 7
4.1 Test samples 7
4.2 Measurement equipment 8
4.2.1 Calorimetric metering box 8
4.2.2 Solar simulator 8
4.2.3 Electrical load (MPPT, electronic or resistive) 9
4.2.4 I-V curve tracer 9
5 Test procedures 9
5.1 General principle 9
5.2 Further specifications 9
5.2.1 Environmental conditions 9
5.2.2 Surface temperature 10
5.2.3 Ambient temperature 10
5.2.4 Integrity of test sample 10
5.3 Procedure for the g-value evaluation of the test samples 10
5.4 Test sample traceability 11
6 Evaluation of g value of subject modules with arbitrary cell area ratio 11
7 Test report 12
Bibliography 14

Figure 1 – Standard test sample and transparent test sample 8
Figure 2 – Cell area ratio dependence of g values under open circuit and maximum power point conditions ($g_{m,oc}$ and $g_{m,mpp}$, respectively) 12

Table 1 – Symbols and units 7
Table 2 – Subscripts 7
