## Reaction to fire tests - Ignitability of building products using a radiant heat source

---

| <b>Contents</b>   |   | <b>Page</b> |
|---|---|-------------|
| 1   | Scope .....                                 | 1           |
| 2   | Normative references .....                  | 1           |
| 3   | Definitions .....                           | 1           |
| 4   | Principles of the test .....                | 2           |
| 5   | Suitability of a product for testing .....  | 3           |
| 6   | Specimen construction and preparation ..... | 3           |
| 7   | Test apparatus .....                        | 5           |
| 8   | Test environment.....                       | 10          |
| 9   | Setting-up procedure and requirements.....  | 11          |
| 10  | Calibration .....                           | 11          |
| 11  | Test procedure.....                         | 12          |
| Annexes A Commentary on the text and guidance notes for operators .....           |   | 32          |
| B Application and limitations of test .....                                       |   | 36          |
| C Higher heat flux capabilities .....   |   | 38          |
| D Interlaboratory trial on variability in time to sustained surface ignition..... |   | 39          |
| E Bibliography .....  |   | 41          |
