

ISO/TS 17892-4:2004-10 (E)

Geotechnical investigation and testing - Laboratory testing of soil - Part 4: Determination of particle size distribution

Contents		Page
Foreword		vi
1	Scope	1
2	Normative references	1
3	Terms and definitions	2
4	Equipment	2
5	Test procedure	6
6	Test results	17
7	Test report	20
Annex A (informative) Calibration of hydrometer		22
Annex B (informative) Calibration of hydrometer		25
Bibliography		26
Tables Table 1 -- Minimum mass required for sieving as a function of particle diameter D90		8
Table 2 -- Maximum mass of soil retained on each sieve		10
Table 3 -- Dry mass of soil specimen for sedimentation test		13
Table 4 -- Insertion depth of pipette		16
Table 5 -- Dynamic viscosity of water		19
Table A.1 -- Temperature correction		24
Figures Figure 1 -- Example of pipette configuration		5
Figure 2 -- Sieving procedure		7
Figure 3 -- General procedure for sedimentation		12
Figure 4 -- Example of a particle size distribution result		21
Figure A.1 -- Example of calibration of hydrometer scale		23
