DIN EN 1859:2006-10 (E)

Chimneys - Metal chimneys - Test methods

Contents

Page

1 Scope 4

2 Normative references 4

3 Definitions 4

4 Test methods for metal chimney products 4
4.1 Compressive strength 4
4.2 Tensile strength 5
4.3 Lateral strength 6
4.4 Gas tightness 7
4.5 Thermal performance test 7
4.6 Thermal resistance 14
4.7 Water vapour diffusion resistance 15
4.8 Condensate resistance test 16
4.9 Rainwater resistance 17
4.10 Terminal flow resistance 18
4.11 Aerodynamic behaviour of terminal under wind conditions 19
4.12 Flow resistance of fittings 20

5 Test report 22

Annex A (normative) Method for measuring ambient temperature 39

Annex B (normative) Method for hot gas temperature measurements 40

Annex C (normative) Method for metal surface temperature measurements 41

Annex D (normative) Method for combustible wood surface temperature measurements 42

Annex E (normative) Locations of thermocouples for surface temperature measurements 43

Annex F (normative) Simplified calculation of thermal resistance for circular flues 49

Annex G (normative) Finite difference equation of thermal resistance for circular flues 51

Annex H (informative) Method for applying an evenly distributed load (horizontal) 57

Annex I (informative) Possible test sequence 59

Annex J (informative) Techniques for flue gas volume flow measurements 61
