ISO 10077-1:2006-09 (E)

Thermal performance of windows, doors and shutters - Calculation of thermal transmittance - Part 1: General

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 2

3 Terms, definitions, symbols and units 2
3.1 Terms and definitions 2
3.2 Symbols and units 3
3.3 Subscripts 3

4 Geometrical characteristics 3
4.1 Glazed area, opaque panel area 3
4.2 Total visible perimeter of the glazing 3
4.3 Frame areas 4
4.4 Window area 4

5 Calculation of thermal transmittance 6
5.1 Windows 6
5.2 Glazing 9
5.3 Windows with closed shutters 10
5.4 Doors 11

6 Input data 13

7 Report 13
7.1 Contents of report 13
7.2 Drawing of sections 13
7.3 Drawing of the whole window or door 14
7.4 Values used in the calculation 14
7.5 Presentation of results 14

Annex A (normative) Internal and external surface thermal resistances 15

Annex B (normative) Thermal conductivity of glass 16

Annex C (informative) Thermal resistance of air spaces between glazing and thermal transmittance of coupled, double or triple glazing 17

Annex D (informative) Thermal transmittance of frames 19

Annex E (normative) Linear thermal transmittance of frame/glazing junction 25

Annex F (informative) Thermal transmittance of windows 27

Annex G (informative) Additional thermal resistance for windows with closed shutters 32

Annex H (informative) Permeability of shutters 33
