DIN EN 15319:2007-10 (E)

General principles of design of fibrous (gypsum) plaster works

Contents

Page

Foreword 3

Introduction 4

1 Scope 5

2 Normative references 6

3 Terms, definitions, symbols and abbreviations 7
3.1 General definitions 7
3.2 Technical definitions 8
3.3 Symbols and abbreviations 16

4 Design 16
4.1 General 16
4.2 Functions 20
4.3 Technical requirements 23
4.4 Essential requirements 34

5 Setting up on site and arrangements 36
5.1 Conditions required prior to commencing the installation of fibrous plaster works 36
5.2 Materials, equipment, accessories and other devices 39

6 Characteristics of the completed works 40
6.1 Surface appearance of the works 40
6.2 Flatness of work surfaces 41
6.3 Verticality of flat work surfaces 42

7 Maintenance and repair 42

Annex A (informative) Separations at abutments and within the area of the works 43

A.1 Examples of situations likely to require separation at edges of work 43
A.2 Examples of situations likely to require sub-division 44

Annex B (informative) Design values of thermal conductivity of gypsum plaster 45

Annex C (informative) Painting works 46

Bibliography 47
