

DIN EN 15255:2007-11 (Englisc h)

Energy performance of buildings - Sensible room cooling load calculation - General criteria and validation procedures

Contents		Page
Foreword		3
Introduction		4
1	Scope	5
2	Normative references	5
3	Terms, definitions, symbols and units	6
3.1	Terms and definitions	6
3.2	Symbols and units	8
3.3	Subscripts	9
4	Basic assumptions	10
5	Data requirement	10
5.1	General	10
5.2	Climatic data	11
5.3	Descriptions of the envelope elements	11
5.3.1	General	11
5.3.2	Boundary conditions	11
5.3.3	Heat transfer coefficients	12
5.3.4	Geometrical and thermophysical parameters of the room envelope	13
5.4	Cooling system device	14
5.4.1	General	14
5.4.2	Convective device	14
5.4.3	Cooled surface device	14
5.5	Classification of the cooling load calculation method	15
6	Report of the calculation	15
6.1	General	15
6.2	Input data	15
6.3	Output data	16
7	Validation procedures	16
7.1	General	16
7.2	Reference room	17
7.3	Climatic data	21
7.4	Test cases	23
7.5	Parameters to be calculated	28
7.6	Test results	29
Annex A (informative)	Example of calculation method based on a simplified model	30
A.1	Introduction	30
A.2	Calculation of internal air and operative temperatures for a given value of applied cooling power	30
A.2.1	Presentation	30
A.2.2	Determination of the air and operative temperatures	32
A.2.3	Terms in Equations (A.1), (A.2), (A.3), (A.4) and (A.5)	34
A.3	Calculation of internal temperatures and required cooling power	38

A.3.1	General description	38
A.3.2	Calculation procedure for control on air temperature	42
A.3.3	Calculation procedure for control on operative temperature	43
	Bibliography	45
