DIN EN 10245-3:2012-01 (E)

Steel wire and wire products - Organic coatings on steel wire - Part 3: PE coated wire

Contents

Page

Foreword 3

Introduction 4

1 Scope 4

2 Normative references 5

3 Terms and definitions 5

4 Types of PE coating materials 5

5 Requirements and test methods for PE coating material 6
5.1 Requirements 6
5.1.1 The composition and method of application 6
5.1.2 PE organic coating material consistency 6
5.1.3 Density 6
5.1.4 Melt flow index 6
5.1.5 Tensile strength 6
5.1.6 Elongation 7
5.2 Test methods 7
5.2.1 General 7
5.2.2 Melt flow index 7

6 Requirements and test methods for PE coating on wire 7
6.1 Requirements 7
6.1.1 General 7
6.1.2 Appearance 7
6.1.3 Colour-gloss and thickness 7
6.1.4 Elongation 7
6.1.5 Concentricity 8
6.1.6 Adherence 8
6.2 Test method 8
6.2.1 Appearance 8
6.2.2 Colour 8
6.2.3 Gloss 8
6.2.4 Thickness 8
6.2.5 Concentricity 8
6.2.6 Tensile strength and elongation 8
6.2.7 Adherence (where required) 8
6.2.8 Resistance to artificial light exposure 8

7 Performance of PE coating materials as the coating on wire 8
7.1 Requirement for colour stability (accelerated weathering) 8
7.2 Test method for colour stability 9

8 Retests 9

9 Inspection and quality assurance 9
