Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Terms and definitions 1

4 Requirements 2
4.1 General 2
4.2 Extract 2
4.3 Direct contact 2

5 Sample preparation and control material preparation 3
5.1 General 3
5.2 General requirements and recommendations for sample preparation 3
5.3 Specific requirements and recommendations for light-curing materials 4
5.4 Specific requirements and recommendations for chemically setting materials 4
5.5 Specific requirements and recommendations for CAD/CAM milled or subtractive manufactured materials 5
5.6 Sterility of samples 5
5.7 Preparation of liquid extracts of material 5
5.7.1 Principles of extraction 5
5.7.2 Extraction vehicle 6
5.7.3 Extraction conditions 6
5.7.4 Consecutive elution cycles 6
5.8 Preparation of materials for direct contact tests 7
5.8.1 Form of samples 7
5.8.2 Principles of direct contact tests 7

6 Bacterial strains, nutrient broths and preparation of bacterial cultures 8

7 Test procedures 8
7.1 General 8
7.2 Test on extracts 9
7.2.1 Tests on extracts toward planktonic cultures of bacteria 9
7.2.2 Test on extracts toward bacterial biofilms 10
7.3 Test by direct contact 11
7.3.1 Test by direct contact toward planktonic cultures of bacteria 11
7.3.2 Test by direct contact toward bacterial biofilms 12
7.4 Determination of antibacterial effects 13
7.4.1 General 13
7.4.2 Assessment of the reduction of the bacterial ability to replicate 13
7.4.3 Assessment of bacterial membrane damage 14
7.4.4 Assessment of the reduction in bacterial metabolic activity 16

8 Assessment of results 17

9 Final test report 17

Annex A (informative) Bacterial strains and corresponding nutrient broths 19
