

ISO 24234:2004-10 (E)

Dentistry - Mercury and alloys for dental amalgam

Contents		Page
Foreword		iv
Introduction		v
1	Scope	1
2	Normative references	1
3	Terms and definitions	2
4	Requirements	3
4.1	General	3
4.2	Chemical composition of the alloy	3
4.3	Biocompatibility	4
4.4	Foreign material and large particles in the alloy powder	4
4.5	Contamination of the mercury by oil, water and foreign material	4
4.6	Purity of mercury -- Free pouring	4
4.7	Variability of preproportioned masses	4
4.8	Properties of the amalgam	5
4.9	Appearance of the mixed amalgam before setting	5
5	Sampling	6
6	Test methods	6
6.1	Chemical composition of the alloy	6
6.2	Foreign material and large particles in the alloy powder	6
6.3	Contamination of the mercury by oil, water or foreign material	7
6.4	Free-pouring of mercury	8
6.5	Determination of the variability of preproportioned masses	8
6.6	Preparation of test specimens to determine compliance with the requirements for creep, dimensional change and compressive strength	9
6.7	Determination of creep	14
6.8	Determination of dimensional change during hardening	14
6.9	Determination of compressive strength	15
6.10	Appearance of the mixed amalgam before setting	15
7	Marking, labelling and packaging	16
7.1	Packaging	16
7.2	Marking	16
7.3	Manufacturer's instructions	17
Annex A (normative) Determination of immersion corrosion for dental amalgam		19
Annex B (normative) Potentiostatic determination of corrosion for dental amalgam		24
Bibliography		28
Table 1 -- Requirements for chemical composition of the alloy		4
Table 2 -- Properties of amalgam		5
Table 3 -- Schedule for the preparation of test specimens		13
Table B.1 -- Potential settings for different reference electrodes and temperatures of the reference electrodes		27
