

ISO/TS 9241-430:2021-12 (E)

Ergonomics of human-system interaction - Part 430: Recommendations for the design of non-touch gestural input for the reduction of biomechanical stress

Contents	Page
Foreword	iv
Introduction	v
1 Scope	1
2 Normative references	1
3 Terms and definitions	2
4 Selection of non-contacting gestures	3
4.1 Overall approach to the selection of non-contacting gestures.....	3
4.2 Large shoulder and elbow movements.....	3
4.3 Optimal hand location relative to body.....	3
4.4 Wrist and forearm posture.....	3
4.5 Comfort of hand postures and motions.....	3
4.5.1 Fist, neutral and extended fingers.....	3
4.5.2 Asynchronous adjacent finger postures.....	4
4.5.3 Thumb flexion or extension and abduction or adduction.....	4
4.5.4 Speed of finger or hand movements and impact.....	4
4.5.5 Hand microgestures.....	5
5 Evaluation of non-contacting gestures	5
5.1 General.....	5
5.2 Laboratory-based study design.....	5
5.3 Subjects for studies.....	5
5.4 Independent variables.....	5
5.5 Example technologies for gesture capture.....	6
5.6 Dependent variables (outcome measures).....	6
5.7 Examples of tasks.....	7
5.8 Target size.....	8
5.9 Data analysis, interpretation and reporting.....	9
Annex A (informative) Example of questionnaire for assessing subjective usability measures	10
Bibliography	11
