ISO 14505-1:2026-05 (E)

Ergonomics of the thermal environment - Evaluation of thermal environments in vehicles - Part 1: Principles and methods for assessment of thermal stress

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Termsanddefinitions 1

4 Assessment principles 2

5 Methods for measurement of in-vehicle climate 3
5.1 General 3
5.2 Thermal comfort 3
5.2.1 General 3
5.2.2 Whole body evaluation 3
5.2.3 Detailed evaluation using equivalent temperature 4
5.3 Heat stress 4
5.3.1 General 4
5.3.2 Solar radiation 4
5.3.3 Air velocity 5
5.3.4 Evaporative heat exchange 5
5.4 Cold stress 5
5.5 Metabolic rate and clothing 5

6 Assessment by means of a numerical manikin 5

7 Assessment by means of participants 5

Annex A (informative) Measurement or estimation of metabolism and clothing characteristics 6

Annex B (informative) Examples of thermal stress assessment 7

Bibliography 9
