ISO/TR 19358:2002-10 (E)

Ergonomics - Construction and application of tests for speech technology

Contents

Page

Foreword iv

Introduction iv

1 Scope 1

2 Terms and definitions 1

3 Description of speech technologies 3
3.1 Introduction 3
3.2 Available technologies 3

4 Description of relevant variables related to speech technology 4
4.1 Introduction 4
4.2 Speech type 5
4.3 Speaker (specification of speaker-dependent aspects) 5
4.4 Task (application-specific description of relevant recognition parameters) 5
4.5 Training (task-related training aspects) 6
4.6 Environment (specification of the speech quality in a specific environment, for both input and output) 6
4.7 Input (specification of the transmission of the speech signal from the microphone to a recognizer input) 6
4.8 Specification of speech technology modules 6

5 Assessment methods 7
5.1 General 7
5.2 Field vs. laboratory evaluation 8
5.3 System transparency 8
5.4 Subjective vs. objective methods 9
5.5 Speech recognition systems 9
5.6 Speech synthesis systems 9
5.7 Speaker identification and verification 9
5.8 Corpora 10
5.9 Related sources of information 10

Annex A (informative) Example of assessment 11

Annex B (informative) Performance measures 14
