ISO 12870:2016-11 (E)

Ophthalmic optics - Spectacle frames - Requirements and test methods

Contents

Page

Foreword v

1 Scope 1

2 Normative references 1

3 Termsanddefinitions 1

4 Requirements 2
4.1 General 2
4.2 Physiological compatibility 3
4.2.1 Construction 3
4.2.2 General physiological compatibility 3
4.2.3 Nickel release 3
4.2.4 Clinical evaluation 4
4.3 Measurement system 4
4.4 Dimensional tolerances on nominal size 4
4.5 Tolerance on screw threads 4
4.6 Dimensional stability at elevated temperature 4
4.7 Resistance to perspiration 4
4.8 Mechanical stability 5
4.8.1 Bridge deformation 5
4.8.2 Lens retention characteristics 5
4.8.3 Endurance 5
4.9 Resistance to ignition 6
4.10 Resistance to optical radiation 6

5 Selection of test samples 6
5.1 General 6
5.2 Testing for nickel release 6
5.3 Change in spectacle frame model 6

6 Preparation and conditioning of test samples 6
6.1 Test lenses 6
6.2 Sample conditioning and test conditions 7

7 Testing, inspection and compliance 7
7.1 Testing 7
7.2 Inspection and examination 8
7.3 Compliance 8

8 Test methods 9
8.1 General 9
8.2 Test for dimensional stability at elevated temperature 10
8.2.1 Apparatus 10
8.2.2 Procedure 10
8.3 Test for resistance to perspiration 10
8.3.1 Apparatus and reagents 10
8.3.2 Procedure 11
8.4 Bridge deformation and lens retention test 11
8.4.1 Apparatus 11
8.4.2 Procedure 12

8.5 Endurance test 13
8.5.1 Apparatus 13
8.5.2 Procedure 14
8.6 Test for resistance to ignition 15
8.6.1 Apparatus 15
8.6.2 Procedure 15
8.7 Test for resistance to optical radiation 15
8.7.1 Apparatus 15
8.7.2 Procedure 16

9 Marking 16

10 Additional information to be supplied by the manufacturer or other person placing the product on the market 17

11 Reference to this International Standard 18

Annex A (informative) Recommendations for the design of spectacle frames 19

Annex B (informative) Examples of layout of test equipment 22

Annex C (informative) European requirements and legislation on nickel release 25

Bibliography 26
