ISO 11146-1:2021 (E)

Lasers and laser-related equipment — Test methods for laser beam widths, divergence angles and beam propagation ratios — Part 1: Stigmatic and simple astigmatic beams

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

4 Coordinate systems

5 Test principles

- 5.1 Applicability
- 5.2 Beam widths and beam diameter
- 5.3 Beam divergence angles
- 5.4 Beam propagation ratios
- 5.5 Combined measurement of beam waist locations, beam widths, beam divergence angles and beam propagation ratios

6 Measurement arrangement and test equipment

- 6.1 General
- 6.2 Preparation
- 6.3 Control of environment
- 6.4 Detector system
- 6.5 Beam-forming optics and optical attenuators
- 6.6 Focusing system

7 Beam widths and beam diameter measurement

- 7.1 Test procedure
- 7.2 Evaluation

8 Measurement of divergence angles

- 8.1 Test procedure
- 8.2 Evaluation

9 Combined determination of beam waist locations, beam widths, divergence angles and beam propagation ratios

10 Test report
