ISO/TR 14997-2:2022-08 (E)

Optics and photonics - Test methods for surface imperfections of optical elements - Part 2: Machine vision

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Termsanddefinitions 1

4 Symbols 2

5 Considerations for machine vision systems applied to surface imperfection inspection of optics 2
5.1 Evaluation limits 2
5.2 Sample preparation 2
5.3 Illumination configuration 2

6 Dimensional inspection using machine vision (IMVD) 3
6.1 Dimensional resolution and accuracy considerations 3
6.2 Brightness and sensitivity 4
6.3 Verifying dimensional inspection system performance 4

7 Visibility inspection using machine vision (IMVV) 5
7.1 Visibility evaluation limit 5
7.1.1 System resolution considerations 5
7.2 Illumination configuration 5
7.3 Brightness and grades 6
7.4 Verifying visibility system performance 6

8 Repeatability,reproducibilityandfidelityinthecontextofopticsimperfections 7
8.1 Evaluation repeatability 7
8.2 Reproducibility 8
8.3 Fidelity 8

AnnexA(informative)Relationbetweenprecisionandclassificationerrorindimensional inspections using machine vision 9
