Optics and photonics - Test methods for surface imperfections of optical elements - Part 2: Machine vision

Contents		Page
Foreword		iv
Introduction		v
1	Scope	1
2	Normative references	1
3	Terms and definitions	1
4	Symbols	2
5	Considerations for machine vision systems applied to surface imperfection inspection of optics	2
5.1	Evaluation limits	2
5.2	Sample preparation	2
5.3	Illumination configuration	2
6	Dimensional inspection using machine vision (IMVD)	3
6.1	Dimensional resolution and accuracy considerations	3
6.2	Brightness and sensitivity	4
6.3	Verifying dimensional inspection system performance	4
7	Visibility inspection using machine vision (IMVV)	5
7.1	Visibility evaluation limit	5
7.1.1	System resolution considerations	5
7.2	Illumination configuration	5
7.3	Brightness and grades	6
7.4	Verifying visibility system performance	6
8	Repeatability, reproducibility and fidelity in the context of optics imperfections	7
8.1	Evaluation repeatability	7
8.2	Reproducibility	8
8.3	Fidelity	8
Annex A (informative)	Relation between precision and classification error in dimensional inspections using machine vision	9
