Optics and photonics - Test methods for surface imperfections of optical elements - Part 2: Machine vision

| Contents | | Page |
|-----------------------|---|-------------|
| Foreword | | iv |
| Introduction | | v |
| 1 | Scope | 1 |
| 2 | Normative references | 1 |
| 3 | Terms and definitions | 1 |
| 4 | Symbols | 2 |
| 5 | Considerations for machine vision systems applied to surface imperfection inspection of optics | 2 |
| 5.1 | Evaluation limits | 2 |
| 5.2 | Sample preparation | 2 |
| 5.3 | Illumination configuration | 2 |
| 6 | Dimensional inspection using machine vision (IMVD) | 3 |
| 6.1 | Dimensional resolution and accuracy considerations | 3 |
| 6.2 | Brightness and sensitivity | 4 |
| 6.3 | Verifying dimensional inspection system performance | 4 |
| 7 | Visibility inspection using machine vision (IMVV) | 5 |
| 7.1 | Visibility evaluation limit | 5 |
| 7.1.1 | System resolution considerations | 5 |
| 7.2 | Illumination configuration | 5 |
| 7.3 | Brightness and grades | 6 |
| 7.4 | Verifying visibility system performance | 6 |
| 8 | Repeatability, reproducibility and fidelity in the context of optics imperfections | 7 |
| 8.1 | Evaluation repeatability | 7 |
| 8.2 | Reproducibility | 8 |
| 8.3 | Fidelity | 8 |
| Annex A (informative) | Relation between precision and classification error in dimensional inspections using machine vision | 9 |
| Bibliography | | 11 |
