Optics and photonics - Test methods for surface imperfections of optical elements - Part 2: Machine vision

Contents	Page
Foreword	iv
Introduction	v
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Symbols	2
5 Considerations for machine vision systems applied to surface imperfection inspection of optics	2
5.1 Evaluation limits	2
5.2 Sample preparation	2
5.3 Illumination configuration	2
6 Dimensional inspection using machine vision (IMVD)	3
6.1 Dimensional resolution and accuracy considerations	3
6.2 Brightness and sensitivity	4
6.3 Verifying dimensional inspection system performance	4
7 Visibility inspection using machine vision (IMVV)	5
7.1 Visibility evaluation limit	5
7.1.1 System resolution considerations	5
7.2 Illumination configuration	5
7.3 Brightness and grades	6
7.4 Verifying visibility system performance	6
8 Repeatability, reproducibility and fidelity in the context of optics imperfections	7
8.1 Evaluation repeatability	7
8.2 Reproducibility	8
8.3 Fidelity	8
Annex A (informative) Relation between precision and classification error in dimensional inspections using machine vision	9
Bibliography	11
