Foreword iv

Introduction v

1 Scope 1

2 Wave propagation and some topics on electromagnetic theory 1
2.1 Parameters, symbols, units and constants, operators and computational procedures 1
2.2 Maxwell's equations 2
2.3 Electromagnetic fields in a medium 3
2.4 Velocity of the wave 3
2.5 Refractive index 3
2.6 Scalar wave equation 3
2.7 Amplitude, angular frequency, wavelength, wave number 4
2.8 Complex notation, complex amplitude 4
2.9 Irradiance 5
2.10 Poynting vector 5
2.11 Propagation of plane waves 6
2.12 Propagation of spherical wave 8
2.13 Propagation of waves with limited extent 9
2.14 Propagation of aspherical waves 10

3 General description of interference and different types of interferometers 12
3.1 Interference between two waves 12
3.2 Coherence 14
3.3 Different arrangements of interference between two beams 19
3.4 Characteristic features for interferometer structures 25

4 Coupled ray-paths in interferometers 33
4.1 Aperture stops and field stops; telecentric imaging 33
4.2 Coupled ray-path 34
4.3 Difference of coherent/incoherent optical imaging 34
4.4 Principal layout of an interferometer 35
4.5 Consequences of not properly imaging the test piece onto the detector 39

5 Random and systematic error sources 39

Annex A (informative) Visibility of fringes 41

Bibliography 42
