DIN EN ISO 22523:2007-04 (E)

External limb prostheses and external orthoses - Requirements and test methods (ISO 22523:2006)

Contents

Page

Foreword 5

Introduction 6

1 Scope 7

2 Normative references 7

3 Terms and definitions 8

4 General requirements 10
4.1 Risk management 10
4.2 Intended performance and technical documentation 11
4.3 Clinical evaluation 11
4.4 Strength and related conditions of use 11

5 Requirements for materials 12
5.1 Flammability of materials and toxicity of combustion products 12
5.2 Biocompatibility, contaminants and residues 13
5.2.1 General 13
5.2.2 Contaminants and residues 13
5.3 Infection and microbiological contamination 13
5.4 Resistance to corrosion and degradation 13

6 Noise and vibration 13

7 Electromagnetic compatibility (EMC) 14

8 Electrical safety 14
8.1 Battery-powered prosthetic and orthotic devices 14
8.1.1 Battery housings and connections 14
8.1.2 Charge level indicators 14
8.2 Circuit protection 15
8.3 Electronic programmable systems 15
8.4 Electrically heated blankets, pads and similar flexible heating appliances 15
8.5 Prosthetic and orthotic devices with skin contact electrodes 15
8.6 Prosthetic and orthotic devices with radio equipment 15
8.6.1 General 15
8.6.2 Frequency spectrum of radio equipment 15
8.6.3 Operation of radio equipment by the user 15

9 Surface temperature 16

10 Sterility 16

11 Design requirements 16
11.1 Safety of moving parts 16
11.2 Safety of connections 16

12 Mechanical requirements 16
12.1 Restrictions on use 16

12.2 Forces in soft tissues of the human body 17
12.3 Ergonomic principles 17

13 Information supplied by the manufacturer 17
13.1 General 17
13.2 Labelling 18
13.3 Intended use 18

14 Packaging 18

Annex A (informative) Guidance on methods of determining the strength of upper-limb prosthetic devices 19

Annex B (normative) Method of determining the mechanical properties of knee joint assemblies for lower-limb orthotic devices 34

Annex C (informative) Guidance on methods of determining the flammability and toxicity of combustion products of lower-limb prosthetic devices 47

Annex D (informative) Guidance on methods of establishing the force or moment required to operate the control and actuating mechanisms on prosthetic and orthotic devices 61

Annex E (informative) Reference to the essential principles of safety and performance of medical devices in accordance with ISO/TR 16142 86

Bibliography 88

Annex ZA (informative) Clauses of this European Standard addressing essential requirements or other provisions of EU Directives 89

Figure A.1 -- Test sample segment lengths 21

Figure A.2 -- Configuration of test 1 22

Figure A.3 -- Configuration of test 2 and test 4 23

Figure A.4 -- Configuration of test 3 and test 5 23

Figure A.5 -- Examples of test sample configurations 24

Figure B.1 -- Example of a test rig design suitable for the application of the four-point loading system 40

Figure B.2 -- Arrangements of the four-point loading system (continued on Figure B.3) 41

Figure B.3 -- Arrangements of the four-point loading system (continued from Figure B.2) 42

Figure B.4 -- Test orientations for joint assemblies intended to restrain motion in four directions mutually at right angles (see B.5.1) 43

Figure B.5 -- Example of a bending moment/angular deflection curve: single-stage failure (see 3.17, 3.18 and 3.19) 44

Figure B.6 -- Examples of a bending moment/angular deflection curve: two-stage failures (see 3.17, 3.18 and 3.19) 45

Figure C.1 -- Test sample dimensions trans-femoral (above-knee) -- Finished limb 54

Figure C.2 -- Test sample dimensions trans-tibial (below-knee) -- Finished limb 55

Figure C.3 -- Test sample dimensions trans-femoral (above-knee) -- Socket former 56

Figure C.4 -- Test sample dimensions trans-tibial (below-knee) -- Socket former 56

Figure C.5 -- Radiant heat source test 57

Figure C.6 -- Flaming ignition source test 58

Figure C.7 -- Sample support frame and weighing platform 59

Figure D.1 -- Bowden cable arrangement during test 75

Figure D.2 -- Test set-up according to D.6.2 for sample category D.3.1 a) Orthotic knee joints with locking mechanism 76

Figure D.3 -- Test set-up according to D.6.3 for sample category D.3.1 b) Orthotic elbow joints with locking mechanism 76

Figure D.4 -- Test set-up according to D.6.4 for sample category D.3.1 c) Prosthetic knee units with locking mechanism (continued on Figure D.5) 77

Figure D.5 -- Test set-up according to D.6.4 for sample category D.3.1 c) Prosthetic knee units with locking mechanism (continued from Figure D.4) 78

Figure D.6 -- Test set-up according to D.6.5 for sample category D.3.1 d) Prosthetic elbow units with locking mechanism 78

Figure D.7 -- Test set-up according to D.6.6 for sample category D.3.1 e) Prosthetic elbow units with user-driven articulation 79

Figure D.8 -- Test set-up according to D.6.7 for sample category D.3.1 f) Terminal devices with built-in closing function 80

Figure D.9 -- Test set-up according to D.6.8 for sample category D.3.1 g) Terminal devices with built-in opening function 81

Figure D.10 -- Test set-up according to D.6.9 for sample category D.3.1 h) Terminal devices with no built-in closing or opening function, actuated by force application 82

Figure D.11 -- Test set-up according to D.6.10 for sample category D.3.1 i) Terminal devices with no built-in closing or opening function, actuated by torque application 83

Figure D.12 -- Test set-up according to D.6.11 for sample category D.3.1 j) Terminal devices with break-open feature for emergency situations 84

Figure D.13 -- Test set-up according to D.6.12 for sample category D.3.1 k) Prosthetic devices with fail-safe release unit, illustrated for a separable prosthetic adaptor plate 85

Table A.1 -- Number of tests and test samples required 25

Table B.1 -- Example of test report 46

Table C.1 -- Worked example of calculating the TTPD 60

Table D.1 -- Parameters of the test set-up for sample category D.3.1 a) 66

Table D.2 -- Parameters of the test set-up for sample category D.3.1 c) 68

Table D.3 -- Details of the test report 73

Table D.4 -- Values of actuating/operating force (and displacement) and moment measured on different categories of test sample 74

Table E.1 -- Correspondence between this International Standard and the essential principles of ISO/TR 16142 87
