ISO 16110-2:2010-02 (E)

Hydrogen generators using fuel processing technologies - Part 2: Test methods for performance

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Terms, definitions and symbols 2
3.1 Terms and definitions 2
3.2 Symbols 3

4 Test conditions 3
4.1 Test boundary 3

5 Measurement technique 5
5.1 General 5
5.2 Operational parameters 5
5.3 Environmental aspects 6
5.4 Ambient conditions 8

6 Test plan 8
6.1 General 8
6.2 Test operating modes 8
6.3 Measurement, test frequency and duration 10
6.4 Uncertainty analysis 11

7 Test procedure 11
7.1 Safe operation of the hydrogen generator and test equipment 11
7.2 Execution of the test plan 11

8 Calculations 12
8.1 Electrical power input 12
8.2 Calculation of flow rates 13
8.3 Calculation of fuel, steam and hydrogen energy 15
8.4 Calculation of efficiency 20

9 Test reports 21
9.1 General 21
9.2 Summary report 21
9.3 Detailed report 22
9.4 Full report 22

Annex A (normative) Symbols and abbreviated terms 23

Annex B (informative) Guidance for uncertainty analysis 26

Annex C (normative) Calculation of fuel heating value 29

Annex D (informative) Definition of hydrogen generator efficiency 33

Annex E (informative) Reference gas 35

Bibliography 38
