

DIN EN 1776:2016-05 (E)

Gas infrastructure - Gas measuring systems - Functional requirements

Contents		Page
European foreword		5
Introduction		6
1	Scope	7
2	Normative references	8
3	Terms and definitions	9
4	General requirements	14
4.1	General	14
4.2	Safety and environment	14
4.3	Quality system for gas measuring system	15
5	Basic requirements for measuring systems	15
5.1	General	15
5.2	Approach to energy measurement	16
5.3	Classification of the measuring system	16
5.4	Gas measuring system modules	18
6	Energy Determination	18
6.1	General	18
6.2	Requirements for measurements used in energy determination	19
6.3	Calculation method of energy using assigned GCV and P, T, Z values	21
6.4	Calculation method of energy using an on-site CVDD and on-site PTZ-Conversion	21
6.5	Calculation method of energy using an assigned GCV and PTZ-conversion	21
6.6	Calculation method of energy using PT-Conversion and assigned GCV and Z value	21
6.7	Calculation method of energy using T-Conversion and assigned GCV, and P, Z values	21
6.8	Gas temperature conversion	21
6.9	Gas pressure conversion	22
6.10	Compressibility conversion	22
6.11	PTZ-conversion	22
6.12	Uncertainty of energy determination	22
7	Design of gas measuring system	23
7.1	General	23
7.2	Safety provision	23
7.3	Housing	24
7.4	Gas measuring station	24
7.5	External influences	24
7.6	Gas measuring installation	25
7.7	Calorific value determination system	29
7.8	Gas pressure measurement	29
7.9	Gas temperature measurement	30
7.10	Conversion device	31
7.11	Compression factor	31
7.12	Pipework requirements	32
7.13	Valves	32
7.14	Parallel meter runs	33
7.15	Pulsations and vibrations	33
7.16	Filter	34

7.17	Gas conditioning, hydrate protection	34
7.18	Duplication of measuring instruments	34
7.19	Venting	35
7.20	Ventilation	35
7.21	Odorants and/or additives	35
7.22	Electromagnetic compatibility (EMC)	35
7.23	Documented provisions	35
8	Construction of a gas measuring installation	36
8.1	General	36
8.2	Specific requirements for thermowells	37
8.3	Specific requirements for (differential) pressure transducers	37
8.4	Specific requirements for sampling systems for CVDD's	37
8.5	Corrosion protection	37
8.6	Electrical equipment in hazardous area	38
9	Testing of the gas measuring installation/station	38
9.1	Strength and tightness test	38
9.2	Purging	38
10	Pre-commissioning and commissioning of the gas measuring installation	38
10.1	General	38
10.2	Pre-commissioning checks	39
10.3	Commissioning and re-commissioning	39
10.4	Acceptance, documentation and hand-over	41
10.5	Post-commissioning checks	41
11	Operation and maintenance	42
11.1	General	42
11.2	Reference equipment	43
11.3	Gas meters	43
11.4	Conversion devices	45
11.5	Calorific value determination device	45
11.6	Sensors	46
11.7	Calibration/verification and maintenance records	46
12	Decommissioning	46
Annex A (informative) Guideline for the selection of meters		47
Annex B (informative) Sensor test procedures		52
B.1	Differential pressure sensors	52
B.2	Pressure sensors	53
B.3	Temperature sensors	53
B.4	Density sensors	54
Annex C (informative) Set of formulae to calculate volume or mass to energy		56
C.1	General	56
C.2	Calculation of volume	56
C.3	Calculation of mass	57
C.4	Calculation of energy	57
Annex D (informative) Conformity assessment for the energy determination		58
D.1	Introduction	58
D.2	Measurement Systems	58
D.3	Energy Measurement Systems	59

Annex E (informative) Specific national examples of the assessment of conformity of the metrological performance of a gas measuring system	60
E.1 Introduction	60
E.2 Example 1	61
E.3 Example 2	64
E.4 Example 3	67
E.5 Example 4	70
E.6 Example 5	72
E.7 Example 6	74
E.8 Example 7	77
Annex F (informative) Documentation and records	81
F.1 Documentation	81
F.2 Records	81
F.3 Documentation approval	81
Annex G (informative) Typical examples of positions of gas measuring installations	82
Annex H (informative) Significant technical changes from the last edition of this standard, EN 1776:1998	83
Bibliography	84
