DIN 30350:2023-10 (E)

Interference of buried pipelines by buried high voltage transmission cables - Measures and minimum distances

Contents

Page

Foreword ... 3
Introduction ... 5
1 Scope ... 7
2 Normative references ... 7
3 Terms and definitions ... 8
4 Principles and structure of buried cable systems for the transmission of electrical energy ... 8
4.1 General ... 8
4.2 Earthing of cable sleeves ... 9
4.3 Cable distances ... 10
4.4 High-voltage three-phase AC transmission (HVAC) ... 10
4.5 High-voltage direct current transmission (HVDC) ... 11
5 Electrical and electromagnetic interferences with metal pipelines ... 12
6 Thermal interferences ... 13
6.1 General ... 13
6.2 General conditions for temperature field calculation ... 13
6.3 Conclusions ... 14
7 Structural interferences ... 15
7.1 General ... 15
7.2 Crossings ... 15
7.3 Parallel routing ... 17
8 Minimum distances ... 17
8.1 Parallel routing ... 17
8.2 Crossings ... 17
Bibliography ... 19

Figures

Figure 1 — Example of the arrangement of components for one phase or one pole ... 9
Figure 2 — Example of earthed cable sleeves ... 10
Figure 3 — Example of a high-voltage three-phase AC cable trench in cross section ... 11
Figure 4 — Example of a high-voltage direct current cable trench in cross section without DMR ... 12

Tables

Table 1 — Example of undisturbed soil temperatures as a function of depth for the design of buried cables ... 14
