DIN EN 17111:2018-12 (E)

Chemical disinfectants and antiseptics - Quantitative ca rrier test for the evaluation of virucidal activity for instruments used in the medical area - Test method and requirements (phase 2, step 2)

Contents

Page

European foreword 4

Introduction 5

1 Scope 6

2 Normative references 6

3 Terms and definitions 6

4 Requirements 6

5 Test method 8
5.1 Principle 8
5.2 Materials and reagents 8
5.2.1 Test organisms 8
5.2.2 Culture media, reagents and cell cultures 9
5.3 Apparatus and glassware 12
5.3.1 General 12
5.3.2 Usual microbiological laboratory equipment 12
5.4 Preparation of test organism suspensions and product test solutions 14
5.4.1 Test organism suspensions (test suspension) 14
5.4.2 Product test solution 14
5.5 Procedure for assessing the virucidal activity of the product 15
5.5.1 General 15
5.5.2 Method 16
5.5.3 Cytotoxicity caused by product solutions 18
5.5.4 Control of efficiency for suppression of disinfectant activity 19
5.5.5 Reference test for virus inactivation 19
5.5.6 Titration of the virus control 19
5.5.7 Titration of test samples 19
5.6 Experimental data and calculation 20
5.6.1 Protocol of the results 20
5.6.2 Calculation of infectivity titre (TCID50 - PFU) 20
5.7 Verification of the methodology 20
5.8 Explanation of terms and abbreviations 21
5.9 Expression of results 21
5.9.1 General 21
5.9.2 Calculation of the virucidal activity of products 21
5.10 Calculation 21
5.10.1 Virucidal activity 21
5.10.2 Claims 22
5.11 Test report 22

Annex A (informative) Example of a typical test report 24

Annex B (informative) Examples of viruses sorted according to their presence in the human body in case of virus infection 26

Annex C (normative) Detoxification of test mixtures by molecular sieving 28

C.1 Molecular sieving with SephadexTM LH 20 28
C.1.1 Principle 28
C.1.2 Sephadex suspension 28
C.1.3 Procedure 28
C.2 Molecular sieving using MicroSpinTM S 400 HR 30
C.3 Determination of the residual virus titre by the large-volume-plating (LVP) method 30
C.3.1 General 30
C.3.2 Example for the calculation of titres and the reduction according to the large- volume-plating Method 31

Annex D (informative) Calculation of the viral infectivity titre 33

D.1 Quantal tests - Example of TCID50 determination by the Spaerman-Kärber method 33
D.2 Plaque test 34
D.3 Biometrical evaluation of experimental approaches and assessment of the disinfecting effect on the virus (reduction [R]): 34
D.3.1 General 34
D.3.2 Calculating the virus titre with 95 % confidence interval 35
D.3.3 Calculating the reduction and its 95 % confidence interval 35
D.3.4 Calculating the average reduction (R(mi)) and its 95 % confidence interval 36
D.3.5 Practical example 37
