ISO 11607-1:2019 (E)

Packaging for terminally sterilized medical devices — Part 1: Requirements for materials, sterile barrier systems and packaging systems

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

4 General requirements

- 4.1 Quality systems
- 4.2 Risk management
- 4.3 Sampling
- 4.4 Test methods
- 4.5 Documentation

5 Materials, preformed sterile barrier systems and sterile barrier systems

- 5.1 General requirements
- 5.2 Microbial barrier properties
- 5.3 Compatibility with the sterilization process
- 5.4 Labelling system
- 5.5 Storage and transport of materials and preformed sterile barrier systems

6 Design and development for packaging systems

- 6.1 General
- 6.2 Design

7 Usability evaluation for aseptic presentation

8 Packaging system performance and stability

- 8.1 General
- 8.2 Packaging system performance testing
- 8.3 Stability testing

9 Packaging system validation and changes

10 Inspection immediately prior to aseptic presentation

11 Information to be provided

Annex A (informative) Guidance on medical packaging

- A.1 Factors influencing the choice of the materials and design of the packaging system
- A.2 Sterilization processes and considerations
- A.3 Sterile barrier systems

Annex B (informative) Standardized test methods, guides and procedures that can be used to demonstrate conformity with the requirements of this document

- B.1 General
- B.2 Packaging materials and preformed sterile barrier systems

Annex C (normative) Test method for resistance of impermeable materials to the passage of air

Annex D (informative) Environmental aspects

Annex E (informative) Draft guidance on ways to differentiate a sterile barrier system from protective packaging
