

# ISO 14160:2020 (E)

## **Sterilization of health care products — Liquid chemical sterilizing agents for single-use medical devices utilizing animal tissues and their derivatives — Requirements for characterization, development, validation and routine control of a sterilization process for medical devices**

---

### **Contents**

	<b>Foreword</b>
	<b>Introduction</b>
<b>1</b>	<b>Scope</b>
<b>2</b>	<b>Normative references</b>
<b>3</b>	<b>Terms and definitions</b>
<b>4</b>	<b>General</b>
<b>5</b>	<b>Sterilizing agent characterization</b>
5.1	General
5.2	Sterilizing agent
5.3	Microbicidal effectiveness
5.4	Effects on materials
5.5	Safety and the environment
<b>6</b>	<b>Process and equipment characterization</b>
6.1	General
6.2	Process characterization
6.3	Equipment characterization
<b>7</b>	<b>Product definition</b>
<b>8</b>	<b>Process definition</b>
8.1	Purpose
8.2	Determination of the inactivation kinetics
8.3	Method for neutralization
8.4	Safety quality and performance
<b>9</b>	<b>Validation</b>
9.1	General
9.2	Installation qualification
9.2.1	Equipment
9.2.2	Installation
9.3	Operational qualification
9.4	Performance qualification
9.4.1	General
9.4.2	Microbiological performance qualification (MPQ)
9.4.2.1	General
9.4.2.2	Combined reference organism/bioburden approach
9.4.2.3	Overkill approach
9.4.3	Physical performance qualification
9.4.4	Aseptic processing qualification
9.5	Review and approval of validation
<b>10</b>	<b>Routine monitoring and control</b>

11 Product release from sterilization

12 Maintaining process effectiveness

- 12.1 General
- 12.2 Maintenance of equipment
- 12.3 Requalification
- 12.4 Assessment of change

Annex A (informative) Guidance for the application of this document

- A.1 Scope
- A.2 Normative references
- A.3 Terms and definitions
- A.4 General
  - A.4.1 Documentation
- A.5 Sterilizing agent characterization
- A.6 Process and equipment characterization
- A.7 Product definition
- A.8 Process definition
- A.9 Validation
- A.10 Routine monitoring and control
- A.11 Product release from sterilization
- A.12 Maintaining process effectiveness

Annex B (normative) Determination of lethal rate of the sterilization process

- B.1 Combined reference organism/bioburden approach
  - B.1.1 Principle
  - B.1.2 Procedure
  - B.1.3 Process lethality determination
    - B.1.3.1 Direct enumeration (inactivation curve)
    - B.1.3.2 Fraction negative method using the Holcomb-Spearman-Karber procedure (HSKP)
    - B.1.3.3 Fraction negative method using the Stumbo-Murphy-Cochran procedure (SMCP)
- B.2 Overkill approach
  - B.2.1 Principle
  - B.2.2 Procedure

Annex C (informative) Flowchart for microbicidal effectiveness (see 5.3), process definition (see Clause 8), and microbiological performance qualification (see 9.4.2)
