ISO 17090-4:2020 (E)

Health informatics — Public key infrastructure — Part 4: Digital signatures for healthcare documents

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definition

4 Target of application

4.1 Target system
4.2 Generation process
4.3 Verification process
4.3.1 General
4.3.2 Verification of ES
4.3.2.1 Verification processes of ES
4.3.2.2 Description of verification processes
4.3.3 Verification of ES-T
4.3.3.1 Verification process of ES-T
4.3.3.2 Description of a verification process
4.3.4 Verification of ES-A
4.3.4.1 Verification process of ES-A
4.3.4.2 Description of verification process
4.4 CAdES specification
4.4.1 General
4.4.2 Long term signature profile
4.4.3 Representation of the required level
4.4.4 CAdES-T profile
4.4.5 CAdES-A profile
4.5 XAdES specification
4.5.1 General
4.5.2 Defined long-term signature profiles
4.5.3 Representation of the required level
4.5.4 Requirement for XAdES-T
4.5.5 Requirement for XAdES-A
4.6 PAdES Specification
4.6.1 General
4.6.2 Defined long term signature profiles
4.6.3 Representation of the required level
4.6.4 Requirement for PAdES-T
4.6.5 Requirement for PAdES-A

Annex A (informative) Use cases

A.1 Targeted use cases
A.1.1 General
A.1.2 The digital signatures for the external documents
A.1.3 The digital signature for the electrical preservation of documents
A.1.4 The digital signature for internal documents
A.1.5 Using a digital signature for the electronic storage of paper documents with an image scanner and disposing of the original paper documents
A.1.6 Using a digital signature for an access log
