ISO 12967-2:2020 (E)

Health informatics — Service architecture (HISA) — Part 2: Information viewpoint

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

4 Abbreviated terms

5 Methodological principles

5.1 Language and notation adopted for the specification of the model
5.2 UML class diagram notation guidelines and profile
5.3 Clusters of objects in the information model
5.4 Operational and descriptive information: classifications, knowledge and its instantiation
5.5 Data types
5.6 General characteristics of the model

6 General characteristics of the model

6.1 Common structure of each information object: the GenericHisaClass
6.2 UML diagram
6.3 Specification of Generic HISA Class
6.3.1 Generic meta-class
6.3.2 Class: Set of structure attributes
6.3.3 Class: Set of class specific attributes
6.3.4 Class: Set of common attributes
6.3.5 Class: Set of system attributes
6.3.6 Class: Set of version attributes
6.3.7 Class: Extended attributes
6.3.8 Class: State changes
6.3.9 Class: Business rules
6.3.10 Class: Classification criteria

7 The reference information models

7.1 Classification objects
7.1.1 Aim
7.1.2 UML information model
7.1.3 Specification of the individual classes
7.1.3.1 Class: Type of concept
7.1.3.2 Class: Concept
7.1.3.3 Class: HISA class
7.1.3.4 Class: HISA class attribute
7.1.3.5 Association class: Relations among concepts
7.1.3.6 Association class: May be classified by
7.2 Subject of care objects
7.2.1 Aim
7.2.2 UML information model
7.2.3 Specification of the individual classes
7.2.3.1 Class: Type of subject of care
7.2.3.2 Class: Subject of care

7.2.3.3 Class: Person
7.2.3.4 Class: Type of contact
7.2.3.5 Class: Contact
7.2.3.6 Association class: Healthcare actor responsibility role
7.2.3.7 Class: Type of mandated period of care
7.2.3.8 Class: Mandated period of care
7.2.3.9 Association class: Person relationship role
7.3 Activity management objects
7.3.1 Aim
7.3.2 UML information model
7.3.3 Specification of the individual classes
7.3.3.1 Class: Type of healthcare activity
7.3.3.2 Class: Healthcare activity
7.3.3.3 Class: Type of care plan
7.3.3.4 Class: Care Plan
7.3.3.5 Association Class: Type of healthcare activity association
7.3.3.6 Association Class: Healthcare activity association
7.3.3.7 Association Class: Type of protocol
7.3.3.8 Association Class: Protocol
7.3.3.9 Association Class: Actual utilization
7.3.3.10 Association Class: Default utilization
7.3.3.11 Association Class: Role of healthcare actor in healthcare activity
7.3.3.12 Association Class: Agenda
7.3.3.13 Class: Clinical guideline
7.4 Clinical and health information objects
7.4.1 Aim
7.4.2 UML information model
7.4.3 Specification on the individual classes
7.4.3.1 Class: Healthcare information
7.4.3.2 Class: Demand for care
7.4.3.3 Class: Health issue
7.4.3.4 Class: Clinical observation and result
7.4.3.5 Class: Evaluation and other
7.4.3.6 Class: Clinical objective
7.4.3.7 Class: Healthcare information Complex
7.4.3.8 Association Class: Role of agent in H.I. life cycle
7.4.3.9 Association Class: Reason for association of healthcare information
7.4.3.10 Association Class: Activity H.I. association
7.4.3.11 Class: Type of healthcare information
7.4.3.12 Association Class: Reason for association of type of healthcare information
7.5 Resource management objects
7.5.1 Aim
7.5.2 UML information model
7.5.3 Specification of the individual classes
7.5.3.1 Class: Type of the individual classes
7.5.3.2 Class: Type of devices
7.5.3.3 Class: Type of staff member
7.5.3.4 Class: Type of location
7.5.3.5 Class: Type of material
7.5.3.6 Class: Type of medicinal product
7.5.3.7 Association Class: Type of resource association
7.5.3.8 Class: Resource
7.5.3.9 Association Class: Resource association
7.5.3.10 Class: Staff member
7.5.3.11 Class: Medicinal product
7.5.3.12 Class: Location
7.5.3.13 Class: Device
7.5.3.14 Class: Material
7.5.3.15 Association Class: Actual availability of resources
7.5.3.16 Association Class: Standard availability of types of resources
7.5.3.17 Class: Active ingredient
7.5.3.18 Association Class: Composition
7.6 User and authorization objects
7.6.1 Aim

7.6.2 UML information model
7.6.3 Specification of the individual classes
7.6.3.1 Class: Type of Healthcare Actor
7.6.3.2 Class: Healthcare Actor
7.6.3.3 Class: Healthcare Organization element
7.6.3.4 Class: Individual healthcare actor
7.6.3.5 Class: System and software component
7.6.3.6 Class: User
7.6.3.7 Class: Authorization profile
7.6.3.8 Association Class: Membership
7.6.3.9 Association Class: Controlled element
7.6.3.10 Class: Application functionality
7.6.3.11 Class: Access rule
7.6.3.12 Association Class: Reason of association between healthcare actors
7.7 Messaging objects
7.7.1 Aim
7.7.2 UML information model
7.7.3 Specification of the individual classes
7.7.3.1 Class: Messaging standard
7.7.3.2 Class: Type of message
7.7.3.3 Class: Message element
7.7.3.4 Class: Elementary information element
7.7.3.5 Class: HISA service
7.7.3.6 Association Class: Invocation rule
7.7.3.7 Association Class: Conversion rule
