ISO/TR 24291:2021 (E)

Health informatics — Applications of machine learning technologies in imaging and other medical applications

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

4 Abbreviated terms

5 Categories for defining use cases of machine learning in medicine

5.1 Categories based on technology
5.1.1 General
5.1.2 Robotics
5.1.3 Continuous monitoring
5.1.4 Machine learning
5.1.5 Deep learning
5.1.6 Image processing
5.1.7 Natural language processing
5.1.8 Audio recognition
5.1.9 Bigdata analysis
5.1.10 Prediction modeling
5.2 Categories based on medical specialty
5.2.1 General
5.2.2 Radiology and Pathology
5.2.3 Dermatology
5.2.4 Ophthalmology
5.2.5 Internal Medicine
5.2.6 Cardiology
5.2.7 Neurology, Urology, Surgery
5.2.8 Anaesthesiologist, Intensive Care Unit
5.2.9 Emergency
5.3 Categories based on medical usage
5.3.1 General
5.3.2 Clinical trials
5.3.3 Clinical assistance
5.3.4 Data-based precision medicine
5.3.5 Medical Imaging and Diagnostic
5.3.6 Hospital Management
5.3.7 Robot surgery
5.3.8 Drug development

6 Use cases of artificial intelligence in medicine

6.1 General
6.2 AI Platform for Lung Cancer Screening and Reporting
6.3 AI based text to speech services with personal voices for speech impaired people
6.4 AI Platform for Chest CT-Scan Analysis
6.5 Support system for optimization and personification of drug therapy
6.6 WebioMed Clinical Decision Support System
