ISO 23118:2021-05 (E)

Molecular in vitro diagnostic examinations - Specifications for pre-examination processes in metabolomics in urine, venous blood serum and plasma

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Terms and definitions 1

4 General considerations 3

5 Urine 4
5.1 Outside the laboratory 4
5.1.1 Urine collection 4
5.1.2 Transport requirements 5
5.2 Inside the laboratory 5
5.2.1 Specimen reception 5
5.2.2 Storage requirements 6
5.2.3 Urine sample processing 6
5.2.4 Long-term storage requirements for urine samples 6
5.2.5 Urine thawing 6

6 Blood 7
6.1 Outside the laboratory 7
6.1.1 Primary collection 7
6.1.2 Transport of pre-processed specimens to laboratory 8
6.2 Inside the laboratory 8
6.2.1 Specimen reception 8
6.2.2 Sample processing 9
6.2.3 Transport of processed samples to a laboratory for metabolomics analysis or transport to a biobank 9
6.2.4 Long-term storage requirements 9
6.2.5 Serum and plasma thawing and use 10

Annex A (informative) Instability of the metabolome 11

Bibliography 17
