

ISO 5367:2000-06 (E)

Breathing tubes intended for use with anaesthetic apparatus and ventilators

Contents		Page
Foreword		iv
Introduction		v
1	Scope	1
2	Normative references	1
3	Terms and definitions	1
4	General requirements	3
4.1	Re-usable breathing tubes	3
4.2	Materials	3
4.3	Design	3
4.4	Length	3
4.5	Resistance to flow	3
4.6	Means of connection	4
4.7	Leakage	5
4.8	Increase in flow resistance with bending	5
4.9	Compliance	5
5	Prevention of electrostatic charges	5
6	Requirements for breathing tubes supplied sterile	5
6.1	Sterility assurance	5
6.2	Packaging of breathing tubes supplied sterile	5
7	Marking	6
7.1	General	6
7.2	Marking of breathing tubes intended for re-use	6
7.3	Marking of packages	6
7.4	Expression of rated flow	7
8	Information to be supplied by the manufacturer	7
Annex A (normative) Measurement of resistance to air flow		8
Annex B (normative) Test for security of attachment of plain end to appropriately-sized male conical connector		10
Annex C (normative) Test for security of attachment of adaptor to breathing tube		11
Annex D (normative) Test for leakage		12
Annex E (normative) Test for increase in flow resistance with bending		14
Annex F (normative) Test for compliance		15
Annex G (informative) Recommendations for materials and design		16
Bibliography		17
