Biotechnology - Predictive computational models in personalized medicine research - Part 1: Constructing, verifying and validating models

Contents		Page
Foreword		iv
Introduction		v
1	Scope	1
2	Normative references	1
3	Terms and definitions	1
4	Principles	4
4.1	General	4
4.2	Computational models in personalized medicine	4
4.2.1	General	4
4.2.2	Cellular systems biology models	5
4.2.3	Risk prediction for common diseases	6
4.2.4	Disease course and therapy response prediction	6
4.2.5	Pharmacokinetic/-dynamic modelling and <i>in silico</i> trial simulations	7
4.2.6	Artificial intelligence models	7
4.3	Standardization needs for computational models	8
4.3.1	General	8
4.3.2	Challenges	8
4.3.3	Common standards relevant for personalized medicine	9
4.4	Data preparation for integration into computer models	9
4.4.1	General	9
4.4.2	Sampling data	9
4.4.3	Data formatting	10
4.4.4	Data description	11
4.4.5	Data annotation (semantics)	11
4.4.6	Data interoperability requirements across subdomains	12
4.4.7	Data integration	13
4.4.8	Data provenance information	13
4.4.9	Data access	14
4.5	Model formatting	14
4.6	Model validation	15
4.6.1	General	15
4.6.2	Specific recommendations for model validation	15
4.7	Model simulation	17
4.7.1	General	17
4.7.2	Requirements for capturing and sharing simulation set-ups	18
4.7.3	Requirements for capturing and sharing simulation results	19
4.8	Requirements for model storing and sharing	19
4.9	Application of models in clinical trials and research	19
4.9.1	General	19
4.9.2	Specific recommendations	20
4.10	Ethical requirements for modelling in personalized medicine	20
Annex A (informative)	Common standards relevant for personalized medicine and <i>in silico</i> approaches	21
Annex B (informative)	Information on modelling approaches relevant for personalized medicine	24
Bibliography		26
