ISO/TS 20428:2024-06 (E)

Genomics Informatics - Data elements and their metadata for describing structured clinical genomic sequence information in electronic health records

Contents

Page

Foreword ..... **v**

Introduction ..... **vi**

1 Scope **1**

2 Normative references **1**

3 Terms and definitions **1**

4 Abbreviated terms **5**

5 Use case scenario **6**

6 Composition of a clinical sequencing report **7**
6.1 General 7
6.2 Overall interpretation in summary 8
6.3 Detailed contents 8

7 Fields and their nomenclature of required data **9**
7.1 General 9
7.2 Clinical sequencing orders 10
7.2.1 General 10
7.2.2 Clinical sequencing order code 10
7.2.3 Date and time 10
7.2.4 Specimen information 11
7.3 Information on subject of care 11
7.3.1 General 11
7.3.2 Subject of care identifiers 11
7.3.3 Subject of care name 11
7.3.4 Subject of care birth date 11
7.3.5 Subject of care sex 11
7.3.6 Subject of care population 11
7.4 Information on legally authorized person ordering clinical sequencing 12
7.5 Performing laboratory 12
7.5.1 General 12
7.5.2 Basic information on performing laboratory 12
7.5.3 Information on report generator 12
7.5.4 Information of legally confirmed person on sequencing report 12
7.6 Associated diseases and phenotypes 12
7.7 Biomaterial information 12
7.7.1 General 12
7.7.2 Types of sample 12
7.7.3 Genomic source class in biomaterial 13
7.7.4 Conditions of specimen that can limit adequacy of testing 13
7.8 Genetic variations 13
7.8.1 General 13
7.8.2 Gene symbols and names 13
7.8.3 Sequence variation information 13
7.9 Classification of variants 14
7.9.1 General 14
7.9.2 Classification of variants based on the pathogeny 15
7.9.3 Classification of variants based on clinical relevance 15
7.10 Recommended treatment 15

7.10.1 General 15
7.10.2 Classification of variants based on clinical relevance 15
7.10.3 Clinical trial information 15
7.10.4 Known protocols related to a variant 16
7.10.5 Other recommendation 16
7.11 Addendum 16

8 Fields and their nomenclature of optional data 16
8.1 General 16
8.2 Subject of care population 17
8.3 Medical history 17
8.4 Family history/Pedigree information 17
8.5 Reference genome version 18
8.6 Populational genomic information 18
8.7 Karyotopic sex 18
8.8 Genetic variation 18
8.9 Classification of variants 18
8.9.1 General 18
8.9.2 Classification of variants as secondary finding 18
8.10 Detailed sequencing information 18
8.10.1 General 18
8.10.2 Clinical sequencing date 18
8.10.3 Quality control metrics 19
8.10.4 Base calling information 19
8.10.5 Sequencing platform information 19
8.10.6 Analysis platform information 20
8.11 References 20

Annex A (informative) **Example structure of clinical sequencing report 21**
