ISO 20397-3:2025-07 (E)

Biotechnology - Massively parallel sequencing - Part 3: General requirements and guidance for metagenomics

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Terms and definitions 1

4 Principle 4
4.1 General 4

5 Sampling strategy 5
5.1 General 5
5.2 Primary sample type 6
5.3 Primary sample stabilization and storage 6
5.4 Primary sample transportation 6
5.5 DNA/RNA isolation 7
5.6 DNA/RNA sample quality 7

6 Nucleic acid library preparation 7

7 Design and review process including sequencing strategy and assessment 7
7.1 General 7
7.2 Short read 7
7.3 Long read 8
7.4 Hybrid assembly 8
7.5 Sample preparation and library construction 8
7.6 Assessment 8

8 Database construction 9
8.1 General 9
8.2 Public database 9
8.3 Self-build database 9

9 Bioinformatics analysis 10
9.1 General 10
9.2 Identification list of microorganisms 11

10 Validation and verification 11
10.1 General 11
10.2 In silico sequence control for bioinformatics pipeline evaluation 11
10.3 Real sample control for pipeline evaluation 11

11 Evaluation 12

12 Test report 12
12.1 General 12
12.2 Test report content 12

Annex A (informative) **Checklist for NA sample quality assessment before library construction** 13

Annex B (informative) **Methods for sample stabilization and storage** 14

Annex C (informative) **Bioinformatics pipeline** 15

Bibliography 17
