

ISO 20397-3:2025-07 (E)

Biotechnology - Massively parallel sequencing - Part 3: General requirements and guidance for metagenomics

Contents		Page
	Foreword	iv
	Introduction	v
1	Scope	1
2	Normative references	1
3	Terms and definitions	1
4	Principle	4
	4.1 General.....	4
5	Sampling strategy	5
	5.1 General.....	5
	5.2 Primary sample type.....	6
	5.3 Primary sample stabilization and storage.....	6
	5.4 Primary sample transportation.....	6
	5.5 DNA/RNA isolation.....	7
	5.6 DNA/RNA sample quality.....	7
6	Nucleic acid library preparation	7
7	Design and review process including sequencing strategy and assessment	7
	7.1 General.....	7
	7.2 Short read.....	7
	7.3 Long read.....	8
	7.4 Hybrid assembly.....	8
	7.5 Sample preparation and library construction.....	8
	7.6 Assessment.....	8
8	Database construction	9
	8.1 General.....	9
	8.2 Public database.....	9
	8.3 Self-build database.....	9
9	Bioinformatics analysis	10
	9.1 General.....	10
	9.2 Identification list of microorganisms.....	11
10	Validation and verification	11
	10.1 General.....	11
	10.2 In silico sequence control for bioinformatics pipeline evaluation.....	11
	10.3 Real sample control for pipeline evaluation.....	11
11	Evaluation	12
12	Test report	12
	12.1 General.....	12
	12.2 Test report content.....	12
	Annex A (informative) Checklist for NA sample quality assessment before library construction	13
	Annex B (informative) Methods for sample stabilization and storage	14
	Annex C (informative) Bioinformatics pipeline	15
	Bibliography	17
