DIN ISO 20397-1:2026-10 (E)

Biotechnology - Massively parallel sequencing - Part 1: Nucleic acid and library preparation (ISO 20397-1:2022)

Contents

Page

Foreword ..... **v**

Introduction ..... **vi**

1 Scope **1**

2 Normative references **1**

3 Terms and definitions **1**

4 Nucleic acid sample quality evaluation **2**
4.1 General 2
4.2 Sample quantification 3
4.3 Sample purity 3
4.4 Sample integrity 3
4.4.1 General 3
4.4.2 Agarose gel electrophoresis 3
4.4.3 Capillary gel electrophoresis 3
4.4.4 Microfluidic analysis system 3
4.4.5 PCR method 3

5 Nucleic acid library preparation **4**
5.1 General 4
5.2 Fragmentation 4
5.2.1 General 4
5.2.2 Mechanical fragmentation 4
5.2.3 Enzymatic fragmentation 4
5.2.4 Chemical fragmentation 5
5.2.5 Fragmented nucleic acid sample quantity 5
5.2.6 Fragmented nucleic acid sample purity 5
5.2.7 Fragmented nucleic acid size distribution 5
5.2.8 Fragmented nucleic acid purification using gel electrophoresis 5
5.3 Addition of universal sequences 5
5.3.1 Repair 5
5.3.2 Ligation of adapter 5
5.3.3 Barcoding/indexing 6
5.4 Size selection 6
5.5 Amplification 6
5.6 Purification and clean up procedures 6
5.7 Library quantification 7
5.7.1 Library quantification method 7
5.7.2 Selection of quantification method 7
5.8 Library qualification 7
5.8.1 General 7
5.8.2 Methods 7

6 Validation **7**

7 Reference materials or controls **8**
7.1 General 8
7.2 Control samples 8
7.3 Positive control 8
7.4 Negative control 9

7.5 No-template control 9
7.6 Spike-in control 9
7.7 Reference materials 9
8 Contaminations 9
8.1 General 9
8.2 Primary sample evaluation 9
8.3 Protocol and operation procedure 10
Annex A (informative) **Checklist for sample quality assessment before library construction 11**
Annex B (informative) **Examples of quality criteria for selected MPS platforms and applications 12**
Annex C (informative) **Reference material list 14**
Bibliography 15
