ISO 14067:2018 (E)

Greenhouse gases — Carbon footprint of products — Requirements and guidelines for quantification

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms, definitions and abbreviated terms

3.1 Terms and definitions
3.1.1 Quantification of the carbon footprint of a product
3.1.2 Greenhouse gases
3.1.3 Products, product systems and processes
3.1.4 Life cycle assessment
3.1.5 Organizations
3.1.6 Data and data quality
3.1.7 Biogenic material and land use
3.2 Abbreviated terms

4 Application

5 Principles

5.1 General
5.2 Life cycle perspective
5.3 Relative approach and functional or declared unit
5.4 Iterative approach
5.5 Priority of scientific approach
5.6 Relevance
5.7 Completeness
5.8 Consistency
5.9 Coherence
5.10 Accuracy
5.11 Transparency
5.12 Avoidance of double-counting

6 Methodology for quantification of the CFP and partial CFP

6.1 General
6.2 Use of CFP–PCR
6.3 Goal and scope definition
6.3.1 Goal of a CFP study
6.3.2 Scope of a CFP study
6.3.3 Functional or declared unit
6.3.4 System boundary
6.3.4.1 General
6.3.4.2 Setting the system boundary
6.3.4.3 Cut-off criteria
6.3.5 Data and data quality
6.3.6 Time boundary for data
6.3.7 Use stage and use profile
6.3.8 End-of-life stage
6.4 Life cycle inventory analysis for the CFP
6.4.1 General
6.4.2 Data collection

6.4.3 Validation of data
6.4.4 Relating data to unit process and functional or declared unit
6.4.5 Refining the system boundary
6.4.6 Allocation
6.4.6.1 General
6.4.6.2 Allocation procedure
6.4.6.3 Allocation procedure for reuse and recycling
6.4.7 CFP performance tracking
6.4.8 Assessing the effect of the timing of GHG emissions and removals
6.4.9 Treatment of specific GHG emissions and removals
6.4.9.1 General
6.4.9.2 Fossil and biogenic carbon
6.4.9.3 Biogenic carbon in products
6.4.9.4 Electricity
6.4.9.4.1 General
6.4.9.4.2 Internally generated electricity
6.4.9.4.3 Electricity from a directly connected supplier
6.4.9.4.4 Electricity from the grid
6.4.9.5 Land use change
6.4.9.6 Land use
6.4.9.7 Aircraft GHG emissions
6.4.9.8 Summary of requirements and guidance in 6.4.9
6.5 Impact assessment for CFP or partial CFP
6.5.1 General
6.5.2 Impact assessment of biogenic carbon
6.6 Interpretation of CFP or partial CFP

7 CFP study report

7.1 General
7.2 GHG values in the CFP study report
7.3 Required information for the CFP study report
7.4 Optional information for the CFP study report

8 Critical review

Annex A (normative) Limitations of the CFP

A.1 General
A.2 Focus on a single environmental issue
A.3 Limitations related to the methodology

Annex B (normative) Comparison based on the CFP of different products

Annex C (normative) The CFP systematic approach

C.1 General
C.2 General requirement
C.3 Description of the CFP systematic approach
C.3.1 General
C.3.2 Data and information collection
C.3.3 Data and information management
C.3.4 Validation of the CFP systematic approach
C.3.5 Use the CFP systematic approach to perform the CFP for any eligible products
C.4 Procedure

Annex D (informative) Possible procedures for the treatment of recycling in CFP studies

D.1 General
D.2 Recycling as an allocation issue
D.3 Closed-loop allocation procedure
D.4 Open-loop allocation procedure

Annex E (informative) Guidance on quantifying GHG emissions and removals for agricultural and forestry products

E.1 General
E.2 Assigning biogenic GHG emissions and removals from land use change and land use to products

E.2.1 General
E.2.2 Reference land use
E.3 Biogenic carbon storage in products
